The author hails from Florida, growing up in the Miami Dade area. There, the young S. R. was surrounded by fire rescue and law enforcement neighbors. One notable influence was City of Miami Fire Chief Dan "Rock" Rooney. Rock moved next door in a home constructed by young S. R.'s father. This became a lifelong familial relationship. When S. R.'s family moved to Opa-Locka, Florida, the Rooneys followed, moving in right next door. After naval tours of service in Vietnam and Korea, S. R. returned to South Florida, completing his bachelor of science degree at Florida International University. S. R. took a job as an insurance adjuster. He adjusted all types of claims, including fire, theft, property damage, and liability insurance. More than once, S. R. found himself in court as a material witness in both civil and criminal cases. S. R. married and moved to Putnam County, Florida. There he volunteered with Putnam Fire Rescue as a REHAB 111 member. Several years later, his wife joined him in fire rescue, becoming Team W. This book elevates alarm management from a fragmented collection of procedures, metrics, experiences, and trial-and-error, to the level of a technology discipline. It provides a complete treatment of best practices in alarm management. The technology and approaches found here provide the opportunity to completely understand the what, the why, and the how of successful alarm systems. No modern industrial enterprise, particularly in such areas as chemical processing, can operate without a secure and reliable infrastructure of alarms and controls—they are an integral part of all production management and control systems. Improving alarm management is an effective way to provide operators with high-value support and guidance to successfully manage industrial plant operations. Readers will find: Recommendations and guidelines are developed from fundamental concepts to provide powerful technical tools and workable approaches; Alarms are treated as indicators of abnormal situations, not simply sensor readings that might be out of position; Alarm improvement is intimately linked to infrastructure management, including the vital role of plant maintenance to alarm management, the need to manage operators' charter to continue to operate during abnormal situations vs. cease operation, and the importance of situation awareness without undue reliance upon alarms. The ability to appreciate technical issues is important, but this book requires no previous specific technical, educational, or experiential background. The style and content are very accessible to a broad industrial audience from board operator to plant manager. All critical tasks are explained with workflow processes, examples, and insight into what it all means. Alternatives are offered everywhere to enable users to tailor-make solutions to their particular sites.

In boyhood, Louis Zamperini was an incorrigible delinquent. As a teenager, he channeled his defiance into running, discovering a prodigious talent that had carried him to

the Berlin Olympics. But when World War II began, the athlete became an airman, embarking on a journey that led to a doomed flight on a May afternoon in 1943. When his Army Air Forces bomber crashed into the Pacific Ocean, against all odds, Zamperini survived, adrift on a foundering life raft. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality with rebellion. His fate, whether triumph or tragedy, would be suspended on the fraying wire of his will.
