by Zyon Silket Ford did a good job of hiding the ECM (electronic control module) on the Ford focus. Many Ford

vehicles have the ECM mounted inside the engine bay, and some older models have the ECM mounted behind the kick panel, on the passenger side of the vehicle. With the Focus, Ford has found a new location: behind the glove box.

Electronic Stability Control (ESC) incorporates a range of technologies designed to give you greater control of your vehicle and help keep you safe. For example, sensors constantly monitor the speed of each individual wheel, the car's 'yaw rate' (its angle and direction) and steering

angle. If you have to steer sharply left or right, perhaps to avoid an obstacle, ESC precisely balances braking power between each individual wheel and can also reduce power from the engine.
