On a Ford 172 or Ford 192 industrial engine the distributor drive rod performs a very important  
function. This Ford 172 distributor drive shaft is a hex sided shaft made of hardened steel, 3.93" long  
with chamfered ends. This drive rod connects the distributor with the oil pump. The Ford 172 or 192  
engine's cam gear drives the distributor which then through this short shaft drives the oil pump.

The Ford 172 engines were made with heavy-duty aluminum pistons, each with three  
compression and two oil rings for maximum high-pressure efficiency. Its forged-steel crankshaft  
was heat treated for strength and rigidity with three main bearings lined with copper-lead.
