While millions of Ford rear-wheel-drive cars are equipped with the durable and simple C4 and C6 transmissions of the 1960s, early in the 1980s Ford replaced those old designs with the AOD transmission for a new generation of cars. Overdrive gears, once popular before WWII, were now becoming popular again, as manufacturers were under increasing pressure to raise fuel economy to meet ever more demanding EPA standards. A nice byproduct of that was more comfortable cruising speeds, where your engine didn't have to work so hard in addition to getting better fuel economy. In Ford AOD Transmissions: Rebuilding and Modifying the AOD, AODE and 4R70W, author George Reid walks you through the process step-by-step, from removing the transmission from the vehicle, to complete disassembly and cleaning, to careful reassembly, to proper re-installation and road testing. Performance modifications are also covered, as well as an ID guide for various model numbers, evolutionary design changes, shift kit installation, and torque converter selection. This book is ideal for people who already have one of these transmissions in their car, as well as enthusiasts who would like to swap one of these more modern units into an older chassis to get all the benefits of overdrive. If you plan on researching or working on any one of these overdrive models, this book is a vital addition to your workbench or library.

New market trends and the emergence of the so-called Internet-based 'new economy' are leading companies to new forms of organization, mostly relying on privileged cooperation links. Nowadays, most manufacturing processes are not carried out by single enterprises. Rather, organizations feel the need to focus on their core competencies and join efforts with others, in order to fulfill the requirements of new products/services demanded by the global market. In a cooperative networked organization, every enterprise is just a node that adds some value to the process; namely, a step in the manufacturing/supply chain. Furthermore, manufacturing companies increasingly encompass what has typically been regarded as the domain of the service sector. They try to establish long-term relationships with their customers, in order to service their needs around a manufactured product. For these reasons, the area of virtual organizations and industrial virtual enterprises is attracting growing interest in terms of research and development, and implementation approaches for new business practices. The main emphasis of this book is on virtual enterprises and other networked organizations, with special focus on: supporting infrastructures and management of distributed business processes, intelligent multi-agent systems, knowledge

management, human interfaces, and socio-economical aspects. Also included in the book are related topics on automation, both in manufacturing and transportation. Special attention is assigned to the fact that advances in information technology and new organizational paradigms will be used not only to induce new economic structures, but also to help a sustainable migration of existing systems towards the new economy. When electronic business initiatives attract such widespread attention, it is important to conciliate the 'old' and 'new' economies under a balanced perspective. Advances in Networked Enterprises is essential reading for researchers and engineering students in production engineering, computer science, electrical engineering, mechanical engineering, industrial sociology, and transportation, as well as for engineers and practitioners in manufacturing and transportation systems organization and planning.

The Muncie 4-speeds, M20, M21, and M22 are some of the most popular manual transmissions ever made and continue to be incredibly popular. The Muncie was the top high-performance manual transmission GM offered in its muscle cars of the 60s and early 70s. It was installed in the Camaro, Chevelle, Buick GS, Pontiac GTO, Olds Cutlass, and many other classic cars. Many owners want to retain the original transmission in their classic cars to maintain its value. Transmission expert and veteran author Paul Cangialosi has created an indispensable reference to Muncie 4-speeds that guides you through each crucial stage of the rebuild process. Comprehensive ID information is provided, so you can positively identify the cases, shafts, and related parts. It discusses available models, parts options, and gearbox cases. Most important, it shows how to completely disassemble the gearbox, identify wear and damage, select the best parts, and complete the rebuild. It also explains how to choose the ideal gear ratio for a particular application. Various high-performance and racing setups are also shown, including essential modifications, gun drilling the shafts, cutting down the gears to remove weight, and achieving race-specific clearances. Muncie 4-speeds need rebuilding after many miles of service and extreme use. In addition, when a muscle car owner builds a high-performance engine that far exceeds stock horsepower, a stronger high-performance transmission must be built to accommodate this torque and horsepower increase. No other book goes into this much detail on the identification of the Muncie 4-speed, available parts, selection of gear ratios, and the rebuild process.

This book introduces community college faculty and faculty developers to the use of faculty learning communities (FLCs) as a means for faculty themselves to investigate and surmount student learning problems they encounter in their classrooms, and as an effective and low-cost strategy for faculty developers working with few resources to stimulate innovative teaching that leads to student persistence and improved learning outcomes. Two-year college instructors face the unique challenge of teaching a mix of learners, from the developmental to high-achievers, that requires using a variety of instructional strategies and techniques. Even the most experienced teachers can find this diversity demanding. Faculty developers at many two-year colleges still rely solely on the one-day workshop model that, while useful, rarely results in sustained student-centered changes in pedagogy or the curriculum, and may not be practicable for the growing cohort of part-time faculty members. By linking work in the classroom with

scholarship and reflection, FLCs provide participants with a sense of renewed engagement and stimulate collegial exploration of ways to achieve educational excellence. FLCs are usually faculty-instigated and cross-disciplinary, and comprise groups of six to fifteen faculty that work collaboratively through regular meetings over an extended period of time to promote research and an exchange of experiences, foster community, and develop the scholarship of teaching. FLCs alleviate burnout and isolation, promote the development, testing, and peer review of new classroom strategies or technologies, and lead to the reenergizing and professionalization of teachers. This book introduces the reader to FLCs and to the Scholarship of Teaching and Learning, offering examples of application in two-year colleges. Individual chapters describe, among others, an FLC set up to support course redesign; an "Adjunct Connectivity FLC" to integrate part-time faculty within a department and collaborate on the curriculum; a cross-disciplinary FLC to promote student self-regulated learning, and improve academic performance and persistence; a critical thinking FLC that sought to define critical thinking in separate disciplines, examine interdisciplinary cross-over of critical thinking, and measure critical thinking more accurately; an FLC that researched the transfer of learning and developed strategies to promote students' application of their learning across courses and beyond the classroom. Each chapter describes the formation of its FLC, the processes it engaged in, what worked and did not, and the outcomes achieved. Just as when college faculty fail to remain current in their fields, the failure to engage in continuing development of teaching skills, will equally lead teaching and learning to suffer. When two-year college administrators restrain scholarship and reflection as inappropriate for the real work of the institution they are in fact hindering the professionalization of their teaching force that is essential to institutional mission and student success. When FLCs are supported by leaders and administrators, and faculty learn that collaboration and peer review are valued and even expected as part of being a teaching professional, they become intrinsically motivated and committed to collaboratively solving problems, setting the institution on a path to becoming a learning organization that is proactive and adept at navigating change.
