By the end of the twentieth century there were some half-million tractors on British farms - more machines than people to drive them. Brian Bell's encyclopaedic book traces the evolution of the farm tractor from the days of starting handle and pan seat to current 4-wheel drive machines with air-conditioned cabs and computer management systems. He deals in particular with developments of the classic period from the 1950s to the 1990s. The book is arranged alphabetically by manufacturer from Allis-Chalmers to Zetor, one hundred marques in total. These are all machines to be found on British farms irrespective of their country of manufacture. Brian runs concisely through the histories of the companies and their major models, illustrated with a wealth of photographs and extracts from sales literature. He adds some special features on items such as hydraulic systems and cold-starting aids. He includes a glossary and full index. This book replaces the author's earlier, successful, *Fifty Years of Farm Tractors*. Many of the photographs are new and the text has been brought up to date to include developments of the early twenty-first century.

This encyclopedia provides the most detailed and complete account ever given of Ford tractors, from the earliest Fordsons to the Ford-Fergusons, the Ford N Series, and the Ford "world" tractors manufactured into the 1970s. Amply illustrated, the book also offers extensive information on the numerous options and accessories, implements and variations that came out of Dearborn, Sherman Bros., and the great Funk Bros. hotrod conversions that could make each of these popular machines utterly unique. Written and compiled by the chief engineer of the Ford N Series tractors and the world's best-known Ford tractor historian, this encyclopedia is the ultimate one-stop resource for anyone with an interest in Ford tractors.

How to Become a Law Enforcement Professional: From the Written Test to the Psychological Evaluation provides readers with valuable, practical information to help them prepare for law enforcement qualification and entrance exams. Opening chapters provide readers with an overview of the history of law enforcement testing and help them carefully consider if law enforcement is the right career path for them. The majority of the book focuses on the various tests individuals are required to take and pass prior to entering the force. Dedicated chapters cover the written exam, physical fitness test, oral board interview, background investigation, and lie detector test. Readers learn about assessment centers and the components of the psychological evaluation, medical examination, and final interview. The concluding chapter prepares readers for what they are likely to experience in police academy training. *How to Become a Law Enforcement Professional* is an ideal textbook for courses in policing and law enforcement. It is also a valuable resource for any individual preparing to take the requisite exams to join the force.

The nature of ethics has been the subject of much controversy and argument in recent decades. Theological Ethics and Global Dynamics tackles these various debates, offering a wide-ranging, comprehensive, and provocative statement of the nature of theological ethics in global times. Offers an accessible, lively, and provocative statement of the nature of moral philosophy and theological ethics in contemporary times. Tackles various perspectives on debates about distinctly Christian ethics. Argues that we need to reframe the arena in which moral questions are asked. Engages a range of positions, exploring distinctively modern issues such as moral and cultural relativism, globalization, problems of consumption and violence, and religious pluralism. Addresses the complexity of certain ethical decisions, which are difficult and far from clear-cut, and yet presents an ethical understanding which is both humane and deeply religious.

Books dealing with the mechanisms of enzymatic reactions were written a generation ago. They included volumes entitled Bioorganic Mechanisms, I and II by T.C. Bruice and S.J. Benkovic, published in 1965, the volume entitled Catalysis in Chemistry and Enzymology by W.P. Jencks in 1969, and the volume entitled Enzymatic Reaction Mechanisms by C.T. Walsh in 1979. The Walsh book was based on the course taught by W.P. Jencks and R.H. Abeles at Brandeis University in the 1960's and 1970's. By the late 1970's, much more could be included about the structures of enzymes and the kinetics and mechanisms of enzymatic reactions themselves, and less emphasis was placed on chemical models. Walsh's book was widely used in courses on enzymatic mechanisms for many years. Much has happened in the field of mechanistic enzymology in the past 15 to 20 years. Walsh's book is both out-of-date and out-of-focus in today's world of enzymatic mechanisms. There is no longer a single volume or a small collection of volumes to which students can be directed to obtain a clear understanding of the state of knowledge regarding the chemical mechanisms by which enzymes catalyze biological reactions. There is no single volume to which medicinal chemists and biotechnologists can refer on the subject of enzymatic mechanisms. Practitioners in the field have recognized a need for a new book on enzymatic mechanisms for more than ten years, and several, including Walsh, have considered undertaking to modernize Walsh's book. However, these good intentions have been abandoned for one reason or another. The great size of the knowledge base in mechanistic enzymology has been a deterrent. It seems too large a subject for a single author, and it is difficult for several authors to coordinate their work to mutual satisfaction. This text by Perry A. Frey and Adrian D. Hegeman accomplishes this feat, producing the long-awaited replacement for Walsh's classic text.
