The systems of innovation approach is considered by many to be a useful analytical approach for better understanding innovation processes as well as the production and distribution of knowledge in the economy. It is an appropriate framework for the empirical study of innovations in their contexts and is relevant for policy makers. This text is the result of the work within an international inter-disciplinary network or "working seminar" with the task of building a more solid and sophisticated conceptual and theoretical foundation for the continued study of innovations in a systemic context. The book has three parts. The first presents an overview and tries to work out some conceptual problems. In the second, the systems of innovation approach is related to innovation theory. Part three is devoted to increasing understanding of the functioning and dynamics of systems of innovation. There is also an introduction where the genesis and anatomy of different systems of innovation approaches are discussed and where the systems of innovation approach is characterized in nine dimensions.

This is a book for tall people, those who relate to them, and anyone interested in height in general. Being tall coincides with considerable professional, athletic, and social benefits. Yet there are also some problems, and these raise some questions. For instance, if longer levers and more cells really are behind increased risk of injuries and cancer, then how is it that giraffes get by? And why is it that society reveres tall stature but then compromises our safety with cramped cars and other things? And, as tall women might be pondering, where have all the tall, dark, and handsome men gone? Lastly, what can be done about all this? These questions and more will all be answered by a tall protagonist over eight chapters: Evolution, Scaling, Spine, Manufactured, Ergonomics, Growth, Longevity, and Society.

Alan Spillett is recognised as one of Britain's foremost painters of trucking scenes with over 700 commissions to date. He portrays lorries from the 1960s, '70s and '80s, when he was a long-distance driver, as well as more recent trucks. His paintings are set in exact locations, capturing to the full the experiences of so many drivers. A Volvo easing its way along a Scottish lochside on a summer's day or an ERF setting out on a wet early morning from a factory in Kent - these are strongly evocative images. The paintings are accompanied by full captions describing the context of the pictures. There are longer features on aspects of trucking and truckers, photographs and miscellanea adding up to a fulfilling read. His images range widely through England, Wales, Scotland and Ireland. Alan's first book, Roadscapes, was published in 2005. The paintings in Roadscapes II have not been published in book form before and many have been prepared specially for this new book.
