2021 Edition, edited by Morton F. Daller. Whether you represent the plaintiff or defendant, the Product Liability Desk Reference, 2021 Edition is a comprehensive resource that provides the most recent statutory and case law developments on product liability laws for each of the fifty states and the District of Columbia. With coverage that is clear and concise, you will be able to make an initial assessment of the strengths and weaknesses of your case across jurisdictions. Practitioner-oriented, and written by leading state experts, each chapter summarizes the variants and developments particular to a specific state jurisdiction, resulting in a text that will assist you in making

critical choices in product liability disputes wherever they arise. You'll find detailed coverage of each state's standards regarding: Causes of action Statutes of limitation and repose Strict liability Negligence Breach of Warranty Punitive damages Wrongful death Pre- and post-judgment interest Employer immunity from suit Joint and severable liability Relevant statutes to product liability actions. Throughout World War II, Detroit's automobile manufacturers accounted for one-fifth of the dollar value of the nation's total war production, and this amazing output from "the arsenal of democracy" directly contributed to the allied victory. In fact, automobile makers achieved such production miracles that many of their methods were adopted by other

defense industries, particularly the aircraft industry. In *Arsenal of Democracy: The American Automobile Industry in World War II*, award-winning historian Charles K. Hyde details the industry's transition to a wartime production powerhouse and some of its notable achievements along the way. Hyde examines several innovative cooperative relationships that developed between the executive branch of the federal government, U.S. military services, automobile industry leaders, auto industry suppliers, and the United Automobile Workers (UAW) union, which set up the industry to achieve production miracles. He goes on to examine the struggles and achievements of individual automakers

---

during the war years in producing items like aircraft engines, aircraft components, and complete aircraft; tanks and other armored vehicles; jeeps, trucks, and amphibians; guns, shells, and bullets of all types; and a wide range of other weapons and war goods ranging from search lights to submarine nets and gyroscopes. Hyde also considers the important role played by previously underused workers-namely African Americans and women-in the war effort and their experiences on the line. Arsenal of Democracy includes an analysis of wartime production nationally, on the automotive industry level, by individual automakers, and at the single plant level. For this thorough history, Hyde has consulted

records collected by the Automobile Manufacturers Association that are now housed in the National Automotive History Collection of the Detroit Public Library. Automotive historians, World War II scholars, and American history buffs will welcome the compelling look at wartime industry in Arsenal of Democracy.

The history of hot rodding and performance cars has been well chronicled through the years. Books and magazines

have covered the cars, builders, pioneers, engineers, early racers, muscle cars, street racers, etc. Most take a nostalgic and fun look at the cars that many have loved their entire lives. Some even cover the lifestyle, the hobby as it involves people, and the effort, time, and commitment people put into it. It is more than just a hobby to most, and to many, a certain wave of nostalgia comes over them when remembering what the car scene was like "back in the day." The local speed shop is an important element of the nostalgic feeling that people have when fondly remembering their hot rodding youth. Speed shops were not just parts stores, they were a communal gathering place for car guys wanting to talk smart, bench race, and catch up on the local scene, as well as to solicit the expert advice from the owner or staff behind the counter. Here, longtime hot

---

rodger and industry veteran Bob McClurg brings you the story of the era and the culture of speed shops as told through individual shop's histories and compelling vintage photography. He covers the birth of the industry, racing versus hot rodding, mail-order, and advertising wars. You learn about the performance boom of the 1960s and 1970s, lost speed shops as well as survivors, and a overview of the giant mail-order speed shops of today.

One of the most exciting new cars of 2004 is profiled in this beautiful book. The Ford GT is the modern version of the incredible GT40, a car created by Ford in the 1960s to beat the Ferraris at Le Mans-which they did! The success of the

original GT40, coupled with its great looks, made it one of the most popular cars in automotive racing history.

Ford has revived the spirit of the original race car with perhaps its most exciting new car in 30 years-the Ford GT.

The new car has lines taken straight off the original GT40 and power supplied by a

500-hp V-8. Three Ford GTs will be built in 2003 to commemorate the 1-2-3

victory at Le Mans in 1966, and the car will see limited regular production beginning

in June 2004. This book includes an in-depth analysis of how the car came to be,

complete with original interviews with Ford execs and engineers as well as drawings

of concept cars. Also included is a short chapter summing up the origins and race history of the GT40. Also a section

discussing the concepts for GT40 revivals. Many of these cars have not been revealed in

publications previously.

and environmental impact of biofuels production, as well as the overall efficiency and output of biofuels production plants. The book provides a comprehensive and systematic reference on the range of biomass conversion processes and technology. Key changes for this second edition include increased coverage of emerging feedstocks, including microalgae, more emphasis on by-product valorization for biofuels' production, additional chapters on emerging biofuel production methods, and discussion of the emissions associated with biofuel use in engines. The editorial team is strengthened by the addition of two extra members, and a number of new contributors have been invited to work with authors from the first edition to revise existing chapters, thus offering fresh perspectives. Provides systematic and detailed coverage of the processes and

technologies being used for biofuel production Discusses advanced chemical, biochemical, and thermochemical biofuels production routes that are fast being developed to address the global increase in energy usage Reviews the production of both first and second generation biofuels Addresses integrated biofuel production in biorefineries and the use of waste materials as feedstocks
