The Handy Forensic Science Answer Book Nelson Thornes Named one of Vulture's Top 10 Best Books of 2020! Leftist firebrand Fredrik deBoer exposes the lie at the heart of our educational system and demands top-to-bottom reform. Everyone agrees that education is the key to

---

creating a more just and equal world, and that our schools are broken and failing. Proposed reforms variously target incompetent teachers, corrupt union practices, or outdated curricula, but no one acknowledges a scientifically-proven fact that we all understand intuitively: Academic potential varies between individuals, and cannot be dramatically improved. In *The Cult of Smart*, educator and outspoken leftist Fredrik deBoer exposes this omission as the central flaw of our entire society, which has created and perpetuated an unjust class structure based on intellectual ability. Since cognitive talent varies from person to person, our

education system can never create equal opportunity for all. Instead, it teaches our children that hierarchy and competition are natural, and that human value should be based on intelligence. These ideas are counter to everything that the left believes, but until they acknowledge the existence of individual cognitive differences, progressives remain complicit in keeping the status quo in place. This passionate, voice-driven manifesto demands that we embrace a new goal for education: equality of outcomes. We must create a world that has a place for everyone, not just the academically talented. But we 'll never achieve this dream until the *Cult of Smart* is destroyed.

The Nutshell Studies of Unexplained Death offers readers an extraordinary glimpse into the mind of a master criminal investigator. Frances Glessner Lee, a wealthy grandmother, founded the Department of Legal Medicine at Harvard in 1936 and was later appointed captain in the New Hampshire police. In the 1940s and 1950s she built dollhouse crime scenes based on real cases in order to train detectives to assess visual evidence. Still used in

forensic training today, the eighteen Nutshell dioramas, on a scale of 1:12, display an astounding level of detail: pencils write, window shades move, whistles blow, and clues to the crimes are revealed to those who study the scenes carefully. Corinne May Botz's lush color photographs lure viewers into every crevice of Frances Lee's models and breathe life into these deadly miniatures, which present the dark side of domestic life, unveiling tales of prostitution, alcoholism, and adultery. The accompanying

line drawings, specially prepared for this volume, highlight the noteworthy forensic evidence in each case. Botz's introductory essay, which draws on archival research and interviews with Lee's family and police colleagues, presents a captivating portrait of Lee. Long Walk to Freedom Dundurn

appropriate for a wide variety of students, including criminal justice, law enforcement, law, and more! Criminalistics: An Introduction to Forensic Science, 11e, strives to make the technology of the modern crime laboratory clear and comprehensible to the non-scientist. The nature of physical evidence is defined, and the limitations that technology and current knowledge impose on its individualization and characterization are examined. By combining case stories with applicable

technology, Criminalistics endeavors to capture the pulse and fervor of forensic science investigations. A major portion of the text centers on discussions of the common items of physical evidence encountered at crime scenes. These chapters include descriptions of forensic analysis, as well as updated techniques for the proper collection and preservation of evidence at crime scenes. Particular attention is paid to the meaning and role of probability in interpreting the

evidential significance of scientifically evaluated evidence. Teaching and Learning Written by a well-known authority in forensic science, this text introduces the non-scientific student to the field of forensic science. Drawing on unprecedented access to the video archives of B'Tselem, an Israeli NGO that distributes cameras to Palestinians living in the West Bank, East Jerusalem, and the Gaza Strip, Liat Berdugo lays out an argument for a visual studies approach to videographic evidence in Israel/Palestine. Using video stills as core material, it discusses the politics of videographic evidence in Israel/Palestine by demonstrating that the conflict is one that has produced an inequality of visual rights. The book highlights visual surveillance and counter surveillance at the citizen level,

how Palestinians originally filmed to “shoot back” at Israelis, who were armed with shooting power via weapons as the occupying force. It also traces how Israeli private citizens began filming back at Palestinians with their own cameras, including personal cell phone cameras, thus creating a simultaneous, echoing counter surveillance. Complicating the notion that visual evidence alone can secure justice, the Weaponized Camera in The Middle East asks how what is seen, but also who is seeing, affects how conflicts are visually recorded. Drawing on over 5,000 hours of footage, only a fraction of

which is easily accessible to the public domain, this book offers a unique perspective on the strategies and battlegrounds of the Israel/Palestine conflict.
