QUESTIONS FOR
FOSSIL CARDS:
1 (shark teeth) Q:
Shark teeth are
commonly found
at the bottom of
the ocean, but
other parts of the
shark are rarely

found there
Suggest a reason for this A: Hard parts of an organism fossilize best The soft parts, such as flesh and cartilage, tend to decompose 2 (cast of a
14.1 Fossil Evidence of Change
Flashcards | Quizlet
In the 1970s, scientists discovered that the concentration of the atmospheric greenhouse gas carbon dioxide (CO₂) was about 30% lower during the ice ages. That prompted theories that the decrease in atmospheric CO₂ levels is a key ingredient in the glacial cycles, but the

causes of the CO₂ change remained unknown. Some data suggested that, during ice ages, CO₂ was trapped in the deep ocean ...
Fossils Are Not Evidence of Change Happening | John Richards
The fossil record provides credible evidence for macroevolutionary change and common descent. It provides direct evidence for major sequential changes in the Earth's biota through transitional forms. Fossil data is essential for a fuller understanding of the rates and patterns of phenotypic change within and among many clades (Polly, 2001).

Fossil evidence - Evolution
The fossil record provides snapshots of the past that, when assembled, illustrate a panorama of evolutionary change over the past four billion years. The picture may be smudged in places and may have bits missing, but fossil evidence clearly shows that life is old and has changed over time. Early fossil

discoveries.
