"This textbook surveys the techniques, methods, and theoretical frameworks of contemporary prehistoric archaeology. In our presentation we view prehistoric archaeology as an integral part of the larger field of anthropology, conditioned by the historical development, concepts and goals of its parent discipline. While we treat the evolving perspectives of archaeological method and theory, together with their implications for understanding the prehistoric past, the text is not a manifesto for any single doctrine or 'school' within the field. Rather, it seeks to synthesize those aspects of both the 'traditional' and the 'new' archaeology that have contributed significantly to the current status of prehistoric archaeology."--p. ix.

Designing and Conducting Health Surveys is written for students, teachers, researchers, and anyone who conducts health surveys. This third edition of the standard reference in the field draws heavily on the most recent methodological research on survey design and the rich storehouse of insights and implications provided by cognitive research on question and questionnaire design in particular. This important resource presents a total survey error framework that is a useful compass for charting the dangerous waters between systematic and random errors that inevitably accompany the survey design enterprise. In addition, three new studies based on national, international, and state and local surveys—the UNICEF Multiple Indicator Cluster Surveys, California Health Interview Survey, and National Dental Malpractice Survey—are detailed that illustrate the range of design alternatives available at each stage of developing a survey and provide a sound basis for choosing among them.
