This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as " a good book on rocket stuff...that ' s a really fun one " by SpaceX founder Elon Musk, readers will want to get

their hands on this influential classic, available for the first time in decades.

The "Europe against Cancer" programme has, from its inception, emphasised the key role which general practitioners must play in the actions necessary to achieve its aim of reducing the incidence and the mortality from cancer in the European Community. General practitioners, because of their day-to-day direct and continuing contact with patients, play a role not only in primary prevention and education of patients, but also in motivating their patients to accept secondary prevention and screening, some of it carried out by general practitioners themselves. These preventive activities are in addition to their traditional role in the care and management of patients with cancer at home, and increasingly, their role in active treatment. In view of the importance of the general practitioner in the "Europe against Cancer" programme, the European Commission, with a view to providing general practitioners with up-to-date useful information, has sponsored the production of this series of publications on organ based cancers, especially written for general practitioners. MICHEL RICHONNIER Coordinator of the "Europe against Cancer" programme, Commission of the European Communities, Brussels

Preface The present textbook is the second in the series published by the Commission of the European Communities within the context of the "Europe Against Cancer" Programme. After lung cancer, it was felt that priority should be given to breast cancer, the most frequent neoplastic disease among European women.
