Equal parts swoonworthy
romance and deeply
affecting family drama,
this debut novel about the

boy next door turned super
hot bad boy will have
readers hooked from the
very first kiss. After his
father's stroke, Max
Holden isn't himself. As his
long-time friend, Jillian
Eldridge only wants to
help, but she doesn't know
how. When Max climbs
through her window one
night, Jill knows she
shouldn't let him kiss her.
But she can't resist, and
when they're caught in the
act by her dad, Jill swears
it'll never happen again.
Because kissing Max

Holden is a terrible idea.
With a new baby sibling on
the way, her parents
fighting all the time, and
her dream of culinary
school suddenly up in the
air, Jill starts spending
more and more time with
Max. And even though her
father disapproves and
Max still has a girlfriend,
not kissing Max is easier
said than done. Will Jill
follow her heart, and allow
their friendship to blossom
into something more, or
will she listen to her head
and stop kissing Max

Holden once and for all?

programme has, from its inception, emphasised the key role which general practitioners must play in the actions necessary to achieve its aim of reducing the incidence and the mortality from cancer in the European Community. General practitioners, because of their day-to-day direct and continuing contact with patients, play a role not only in primary prevention and education of patients, but also in motivating their patients to accept secondary prevention and screening,

some of it carried out by general practitioners themselves. These preventive activities are in addition to their traditional role in the care and management of patients with cancer at home, and increasingly, their role in active treatment. In view of the importance of the general practitioner in the "Europe against Cancer" programme, the European Commission, with a view to providing general practitioners with up-to-date useful information, has sponsored the production of

this series of publications on organ based cancers, especially written for general practitioners. MICHEL RICHONNIER Coordinator of the "Europe against Cancer" programme, Commission of the European Communities, Brussels

Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume

is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as “a good book on rocket stuff...that’s a really fun one” by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.
