This seminal study explores the significant changes in the global IT industry as production has shifted from the developed world to massive sites in the developing world that house hundreds of thousands of workers in appalling low-wage conditions to minimize labor costs. The authors trace the development of the new networks of globalized mass production in the IT industry and the reorganization of work since the 1990s, capturing the systemic nature of an industry-wide restructuring of production and work in the global context. Their wide-ranging and detailed analysis takes the debates on the globalization of production beyond narrow perspectives of determining criteria of “ success ” for participation in global networks. Rather, they emphasize the changing nature of work, employment relations, and labor policies and their implications for the possibilities of sustainable economic and social development.

**Global Value Chains in a Postcrisis World** Weidenfeld & Nicolson  
This book opens a fresh chapter in the debate on local enterprise clusters and their strategies for upgrading in the global economy. The authors employ a novel conceptual framework in their research on industrial clusters in Europe, Latin America and Asia and provide new perspectives and insights for researchers and policymakers alike.The debate on local upgrading capacity is torn between two lines of thinking: those who believe that local relationships between enterprises and institutions are key to upgrading, and those who argue that the spaces for upgrading are defined by the sourcing strategies of global buyers. From this debate a number of important questions arise: how feasible is it to develop local upgrading strategies? Can local policy networks make a difference, or do global forces undermine them? Do global quality and labour standards marginalise developing country producers or do they help them to upgrade? To answer these questions, the book brings together theoretical and empirical research on local and regional clusters, global value chains and global standards, using case studies from developed and developing countries. The authors provide a new understanding of how global and local governance interact, highlighting power and inequality in global chains but also identifying scope for local action.By showing how and why insertion in global value chains can accelerate or inhibit local upgrading, this book represents a significant contribution to the academic and political debate on globalization. It will be essential reading for all students, academics and researchers interested in global political economy, global and local governance structures, economic geography and innovation studies.

The Legacy of Nazi Occupation Nova Publishers  
The global economic system is experiencing a profound period of rapid change. The emergence of globalised production and distribution systems, which bring together diverse constellations of economic actors through a complex regime of global corporate governance, state regulation and new international divisions of labour, demands corresponding and innovative explanatory models. Global value chains (GVCs) and global production networks (GPNs) have been particularly useful as conceptual frameworks for understanding the global market engagement of firms, regions and nations. This book examines the rise of GVCs and GPNs as dominant features of the international political economy. It brings together leading thinkers in the field and sets out new directions for future scholarship in understanding the contemporary global economic system. In doing so, this book makes a significant contribution to our understanding of the international political economy and the global economic system in the post-Washington Consensus era of contemporary capitalism. This book was published as a special issue of the Review of International Political Economy.

Guy Bourdin, who died in 1991, was a legend in the world of fashion photography. He was the most radical and audacious photographer of his generation but his reputation has been surrounded in secrecy - he rarely allowed his photographs to appear outside the pages of French Vogue. No book of his work has previously been published. His estate was frozen by the courts until 1997, after which his son, Samuel, gained control of his work as a result of which this long-awaited book can be published. Bourdin was originally a painter and a friend of Man Ray. His fashion photographs began to incorporate his surrealist influences. Fashion photography became an arena for his personal obsessions. The results are as shocking and astonishing as any commercial photograph ever published. They were executed meticulously. Despite his intense eroticism, subversion and, as Cecil Beaton described, 'his grotesque little gamines', Beaton referred to him in 1975 as 'unquestionably the most interesting fashion photographer in Paris today'.His work was said to have represented 'the look of an era -glamorous, hard-edged, cleverly spiced with vulgarity.. .rich with implied narratives and strong erotic undercurrents'

This volume, in Studies in the Social and Cultural History of Modern Warfare series, examines how France, Belgium and the Netherlands emerged from the military collapse and humiliating Nazi occupation they suffered during the Second World War. Rather than traditional armed conflict, the human consequences of Nazi policies were resistance, genocide and labour migration to Germany. Pieter Lagrou offers a genuinely comparative approach to these issues, based on extensive archival research; he underlines the divergence between ambiguous experiences of occupation and the univocal post-war patriotic narratives which followed. His book reveals striking differences in political cultures as well as close convergence in the creation of a common Western European discourse, and uncovers disturbing aspects of the aftermath of the war, including post-war antisemitism and the marginalisation of resistance veterans. Brilliantly researched and fluently written, this book will be of central interest to all scholars and students of twentieth-century European history.

The break-up of BAA and the blocked takeover of Bratislava airport by the competing Vienna airport have brought the issue of airport competition to the top of the agenda for air transport policy in Europe. Airport Competition reviews the current state of the debate and asks whether airport competition is strong enough to effectively limit market power. It provides evidence on how travellers chose an airport, thereby altering its competitive position, and on how airports compete in different regions and markets. The book also discusses the main policy implications of mergers and subsidies.
