Das Buch bietet einen neuen Ansatz für die Debatte über die Ziele des Kartellrechts. Ausgehend von einer rechtssoziologischen Perspektive begreift es die Konkurrenz als eine Form mit sozialen Funktionen. So ist Konkurrenz keine bloße Ableitung von Effizienz oder Verbraucherwohlfahrt, sondern ein eigenständiges Ziel des Kartellrechts, das einseitige Verhaltens- und Fusionsfälle durchdringt. Nach Tobias Werron ist dies ein "großartiges Stück Gelehrsamkeit (...), das eine Offenheit des Geistes und Unabhängigkeit des Denkens nahelegt". Celso Campilongo schreibt: "Die Veröffentlichung dieser Arbeit sollte gefeiert werden. Es ist alles andere als trivial oder üblich, (...) eine Soziologie des Kartellrechts zu rekonstruieren".

The fifth edition of Romer's Advanced Macroeconomics continues its tradition as the standard text and the starting point for graduate macroeconomics courses and helps lay the groundwork for students to begin doing research in macroeconomics and monetary economics. Romer presents the major theories concerning the central questions of macroeconomics. The theoretical analysis is supplemented by examples of relevant empirical work, illustrating the ways that theories can be applied and tested. In areas ranging from economic growth and short-run fluctuations to the natural rate of unemployment and monetary policy, formal models are used to present and analyze key ideas and issues. The book has been extensively revised to incorporate important new topics and new research, eliminate unnecessary material, and further improve the presentation.

Distributional Consequences of Direct Foreign Investment examines the net effect of direct foreign investment (DFI) on both U.S. employment demand in the short run and on the level and distribution of domestic income in the long run. Topics covered range from measurement of home-foreign substitution to the employment impact of DFI and the long-run distributional consequences of overseas investment. Short-run labor market adjustments to unemployment resulting from overseas production transfers are also discussed. Comprised of nine chapters, this volume begins with a survey of existing studies of the DFI phenomenon that critically evaluates the question of what firms would or could have done in the absence of a DFI alternative. The reader is then introduced to an alternative framework within which to estimate the degree of substitutability of home for foreign production. This framework consists of a microeconomic model of the multinational firm as it operates under two alternative policy regimes, one of which places no restrictions on the firm's activities and the second denies it the option of establishing a foreign production subsidiary. Input-output techniques, together with information on substitutability, are used to obtain estimates of the net employment impact of DFI. A probabilistic model of an industry labor market is also presented. In addition, the book analyzes the effect of technology transfer through licensing on the size and composition of domestic income. This monograph will be useful to practitioners who employ econometrics and mathematical economics.

This edited collection captures current thinking about and future practices and strategies for human resource development (HRD). It brings together contributions from a number of leading academics, practitioners and consultants who are active in the debate about the future of HRD. As the world of work grows ever more complex, diverse and ambiguous, there is growing interest in how technology, globalisation, changing workforce demographics and talent development can play a greater role in developing organisations for the future. In this context, HRD is a critical tool to address current complexity and offer solutions to organisational learning needs. Split into two volumes covering technology and innovation as well as the role of HRD in disrupting management and organisational thinking, these books provide analyses of the role of HRD in addressing the needs of the digital revolution. Volume II offers a practical assessment of how HRD can drive change at an individual and organisational level through the adoption of various best practices. It provides the reader key insights into the HRD response to current issues and whether modern organisations should change their approach to learning and development. Together the two volumes offer a highly reflective, critical and insightful assessment on the foundations of HRD in the workplace.

Consumer markets for foods and beverages in developed countries are well supplied and highly fragmented. Yet, the question being asked is how close retailers actually come to fulfilling their customers' requirements. The concept of consumer value is one of the main pillars underpinning the theory of market differentiation. This book takes an interdisciplinary approach to the analysis of satisfaction in relation to the consumption of food, with both food science and consumer science playing central parts. It approaches food quality from both the technical and the consumer satisfaction perspectives, and assesses the roles of management and regulatory tools in delivering food quality for all. Each area is discussed in detail, using the appropriate technical terminology, but keeping the text accessible to readers from both academic traditions, as well as to non-specialist readers.
