Frankenstein's Science Springer

For all its concern with change in the present and future, science fiction is deeply rooted in the past and, surprisingly, engages especially deeply with the ancient world. Indeed, both as an area in which the meaning of "classics" is actively transformed and as an open-ended set of texts whose own 'classic' status is a matter of ongoing debate, science fiction reveals much about the roles played by ancient classics in modern times. Classical Traditions in Science Fiction is the first collection in English dedicated to the study of science fiction as a site of classical receptions, offering a much-needed mapping of that important cultural and intellectual terrain. This volume discusses a wide variety of representative examples from both classical antiquity and the past four hundred years of science fiction, beginning with science fiction's "rosy-fingered dawn" and moving toward the other-worldly literature of the present day. As it makes its way through the eras of science fiction, Classical Traditions in Science Fiction exposes the many levels on which science fiction engages the ideas of the ancient world, from minute matters of language and structure to the larger thematic and philosophical concerns.

The Allegory of the Cave, or Plato's Cave, was presented by the Greek philosopher Plato in his work *Republic* (514a–520a) to compare "the effect of education (???????) and the lack of it on our nature". It is written as a dialogue between Plato's brother Glaucon and his mentor Socrates, narrated by the latter. The allegory is presented after the analogy of the sun (508b–509c) and the analogy of the divided line (509d–511e). All three are characterized in relation to dialectic at the end of Books VII and VIII (531d–534e). Plato has Socrates describe a group of people who have lived chained to the wall of a cave all of their lives, facing a blank wall. The people watch shadows projected on the wall from objects passing in front of a fire behind them, and give names to these shadows. The shadows are the prisoners' reality.

Though Mary Shelley's *Frankenstein* has inspired a vast body of criticism, there are no book-length studies that contextualise this widely taught novel in contemporary scientific and literary debates. The essays in this volume by leading writers in their fields provide new historical scholarship into areas of science and pseudo-science that generated fierce controversy in Mary Shelley's time: anatomy, electricity, medicine, teratology, Mesmerism, quackery and proto-evolutionary biology. The collection embraces a multifaceted view of the exciting cultural climate in Britain and Europe from 1780 to 1830. While *Frankenstein* is all too often read as a

cautionary tale of the inherent dangers of uncontrolled scientific experimentation, the essays here take the reader back to a period when experimenters and radical thinkers viewed science as the harbinger of social innovation that would counter the virulent conservative backlash following the French Revolution. The collection will be an invaluable resource for students and scholars specialising in Romanticism, cultural history, philosophy and the history of science.

Frankenstein (Annotated and Illustrated) Volume Ember

Mary Shelley began writing *Frankenstein* when she was only eighteen. At once a Gothic thriller, a passionate romance, and a cautionary tale about the dangers of science, *Frankenstein* tells the story of committed science student Victor Frankenstein.

Obsessed with discovering the cause of generation and life and bestowing animation upon lifeless matter, Frankenstein assembles a human being from stolen body parts but; upon bringing it to life, he recoils in horror at the creature's hideousness. Tormented by isolation and loneliness, the once-innocent creature turns to evil and unleashes a campaign of murderous revenge against his creator, Frankenstein. *Frankenstein*, an instant bestseller and an important ancestor of both the horror and science fiction genres, not only tells a terrifying story, but also raises profound, disturbing questions about the very nature of life and the place of humankind within the cosmos: What does it mean to be human? What responsibilities do we have to each other? How far can we go in tampering with Nature? In our age, filled with news of organ donation genetic engineering, and bio-terrorism, these questions are more relevant than ever.
