At the time of his famous kite experiment, Benjamin Franklin was unaware that his theories about electricity had already made him a celebrity all over Europe, especially in France, where fashionable circles loved to discuss scientific discovery. Admired by the French court and beloved by French citizens, Franklin effectively became America's first foreign diplomat, later helping to enlist France's

military and financial support for the American Revolution. A father of the revolution and a signer of the Constitution, Franklin was a lightning rod in political circles - "a dangerous Engine," according to a critic. And although he devoted the last twenty-five years of his life to affairs of state, his first love was always science. Handsome pen-and-ink drawings highlight moments in this revolutionary thinker's life.

This book explores changes in rural households of the Georgia Piedmont through the material culture of farmers as they transitioned from self-sufficiency to market dependence. The period between 1880 and 1910 was a time of dynamic change when Southern farmers struggled to reinvent their lives and livelihoods. Relying on primary documents, including probate inventories, tax lists, state and federal census data,

and estate sale results, this study seeks to understand the variables that prompted farm households to assume greater risk in hopes of success as well as those factors that stood in the way of progress. While there are few projects of this type for the late nineteenth century, and fewer still for the New South, the findings challenge the notion of farmers as overly conservative consumers and call into question traditional views of conspicuous consumption as a key indicator of wealth and status.
