The EVA Challenge Stoddart

Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research

Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application.

Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful

conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Knowledge of the processes of educational change is said to be the missing ingredient in attempts to bring about educational innovation and reform. Whether these efforts involve grass roots innovation or large-scale societal reform, failure to understand and act on existing knowledge of the change process has accounted for the widespread lack of success in making educational improvements. This volume analyzes what is known about successful or productive change processes, and identifies corresponding action strategies at the individual, school, local and state levels. Included in this book is a major treatment of the topic of the 'ethics of planned change', a neglected topic in recent literature, especially since strategies for intervening in the change process are receiving more attention. This book is intended to be used by teachers in training and in service, teacher trainers, educational researchers, education historians and administrators.

Six months after its American introduction in 1985, the Yugo was a punch line; within a year, it was a staple of late-night comedy. By 2000, NPR's Car Talk declared it "the worst car of the millennium." And for most Americans that's where the story begins and ends. Hardly. The short, unhappy life of the car, the men who built it, the men who imported it, and the decade that embraced and discarded it is rollicking and astounding, and one of the greatest untold business-cum-morality tales of the 1980s. Mix one rabid entrepreneur, several thousand "good" communists, a willing U.S. State Department, the shortsighted Detroit auto industry, and improvident bankers, shake vigorously, and you've got *The Yugo: The Rise and Fall of the Worst Car in History*. Brilliantly re-creating the amazing confluence of events that produced the Yugo, Yugoslav expert Jason Vuic uproariously tells the story of the car that became an international joke: The American CEO who happens upon a Yugo right when his company needs to find a new import or go under. A State Department eager to aid Yugoslavia's nonaligned communist government. Zastava Automobiles, which overhauls its factory to produce an American-ready Yugo in six months. And a hole left by Detroit in the cheap subcompact market that creates a race to the bottom that leaves the Yugo . . . at the bottom.

Increasingly, scholars view reliability—the ability to plan for and withstand disaster—as a social construction. However, there is a tendency to evoke this concept only in the face of catastrophes, such as the British Petroleum oil spill or the Space Shuttle Challenger explosion. This book frames reliability as a fundamental issue in the study of organizations—one that can also improve day-to-day operations. Bringing together a diverse cast of contributors, it considers how we can account for the ability of some organizations to maintain high reliability and what we can learn from them. The chapters distinguish reliability from related lines of inquiry; take stock of relevant research from different disciplinary perspectives; highlight implications for practice; and identify directions, questions, and priorities for future research. The first of its kind in over twenty years, this volume delivers a dynamic base of shared knowledge and an integrative research agenda at a time when organizational reliability has never been so important.

The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In *Reinforcement Learning*, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this

part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

Steinbeck's tough yet charming portrait of people on the margins of society, dependant on one another for both physical and emotional survival Published in 1945, Cannery Row focuses on the acceptance of life as it is: both the exuberance of community and the loneliness of the individual. Drawing on his memories of the real inhabitants of Monterey, California, including longtime friend Ed Ricketts, Steinbeck interweaves the stories of Doc, Dora, Mack and his boys, Lee Chong, and the other characters in this world where only the fittest survive, to create a novel that is at once one of his most humorous and poignant works. In her introduction, Susan Shillinglaw shows how the novel expresses, both in style and theme, much

that is essentially Steinbeck: "scientific detachment, empathy toward the lonely and depressed...and, at the darkest level...the terror of isolation and nothingness." For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators. From the Trade Paperback edition. But Not the Hippopotamus Cambridge University Press Read the story behind the award-winning film Judas and the Black Messiah On December 4, 1969, attorney Jeff Haas was in a police lockup in Chicago, interviewing Fred Hampton's fiancée. Deborah Johnson described how the police pulled her from the room as Fred lay unconscious on their bed. She heard one officer say, "He's still alive." She then heard two shots. A second officer said, "He's good and dead now." She looked at Jeff and asked, "What can you do?" The Assassination of Fred Hampton remains Haas's personal account of how he and People's Law Office partner Flint Taylor pursued Hampton's assassins, ultimately prevailing over unlimited government resources and FBI conspiracy. Fifty years later, Haas writes that there is still

an urgent need for the revolutionary systemic changes Hampton was organizing to accomplish. Not only a story of justice delivered, this book spotlights Hampton as a dynamic community leader and an inspiration for those in the ongoing fight against injustice and police brutality.

In the heat of the city, a man is out of time: speeding in a beat-up Ford Tempo, blasting easy-listening music. Reporter Steve Everett drinks too much, makes love to his boss's wife, and has just stumbled upon a shocking truth: a convicted killer is about to be executed for a crime he didn't commit. In the cold confines of Death Row, Frank Beachum is also out of time. Ready to say good-bye to the wife and child he loves and hello to the God he still believes in, Beachum knows he did not kill a convenience store clerk six years ago. But in a few hours—if Steve Everett can't find the evidence to stop it—a needle is going to pierce Frank Beachum's skin. The killing machine is primed. The executioner is waiting. And so is the priest. Now the clock is ticking down and the race is on—between
