A desperate man in a dying kingdom is awarded the most coveted—and most deadly—choice of all. The once mighty kingdom of Jorsk is in decline, its borders beset by enemies, both worldly and otherworldly. The king has retreated to the capital, abandoning the far-flung provinces. The only hope of the people lies in their Chosen One, blessed by the gods as defender of the realm. But of late every Chosen One has died, targeted by the harshest of the enemy attacks. Only the most desperate of men now seek that post. Devlin Stonehand is a desperate man. Overwhelmed by grief at the death of his family, he has lost the will to live. But he has vowed to provide for his brother's widow and children, and the post of the Chosen One carries with it a substantial reward. For Devlin, a farmer and metalsmith, it is the answer to his prayers—prayers that include a yearning for the oblivion of death. After he has won the post, though, Devlin discovers that sometimes the

hardest goal to achieve is that which had once seemed the simplest. For unlike the other Chosen Ones, he persists in surviving. Are the gods just tormenting him further, or does he have a greater destiny than he imagined? Can a man who courts death ever truly come to embrace life?

Constructibility Dark Horse Comics
ACQUIRING CONFIDENCE BEFORE AN AUDIENCE There is a strange sensation often experienced in the presence of an audience. It may proceed from the gaze of the many eyes that turn upon the speaker, especially if he permits himself to steadily return that gaze. Most speakers have been conscious of this in a nameless thrill, a real something, pervading

the atmosphere, tangible, evanescent, indescribable. All writers have borne testimony to the power of a speaker's eye in impressing an audience. This influence which we are now considering is the reverse of that picture--the power _their_ eyes may exert upon him, especially before he begins to speak: after the inward fires of oratory are fanned into flame the eyes of the audience lose all terror.

Why is math so hard? And why, despite this difficulty, are some people so good at it? If there's some inborn capacity for mathematical thinking—which there must be, otherwise no one could do it —why can't we all do it well? Keith Devlin has answers to all these difficult questions, and in giving them shows us how mathematical ability evolved, why it's a part of language ability, and how we can make better use of this

innate talent. He also offers a breathtakingly new theory of language development—that language evolved in two stages, and its main purpose was not communication—to show that the ability to think mathematically arose out of the same symbol-manipulating ability that was so crucial to the emergence of true language. Why, then, can't we do math as well as we can speak? The answer, says Devlin, is that we can and do—we just don't recognize when we're using mathematical reasoning.

The Daddy Dilemma Basic Books

"Mathematical thinking is not the same as 'doing math'--unless you are a professional mathematician. For most people, 'doing math' means the application of procedures and

symbolic manipulations. Mathematical thinking, in contrast, is what the name reflects, a way of thinking about things in the world that humans have developed over three thousand years. It does not have to be about mathematics at all, which means that many people can benefit from learning this powerful way of thinking, not just mathematicians and scientists."--Back cover.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in

the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
