‘ Some years ago I read the phrase "the spontaneous revulsion to the deformed". The phrase seemed to be both potent and provocative: Was there a spontaneous revulsion to disabilities in children or did such conditions evoke a more compassionate response? ’ Originally published in 1978, the problems of the disabled were no longer confined to the medical and educational professionals, but had become the concern of the community as a whole. Using terminology very much of the time, the author shows how attitudes towards different kinds of disability had developed at the time; they varied both regionally and by social class, sometimes calling into question the accepted ‘ facts ’ about the distribution of a particular condition. Most importantly, the author examines these attitudes together with many other social and psychological factors in relation to their impact on the social behaviour and developing self-image of the disabled child. It becomes clear that the dangers of categorization and the difficulties in overcoming stigma have a profound influence on the education and socialization of disabled

children. This book will be of historical interest to students and teachers of psychology, education, social work and rehabilitation; and it will provide insight for parents and all those concerned with the care and development of the disabled child about how far we have come.
