Details how the nation can bring about a fundamental change in our failed and inhumane national drug policy. Shows how the harms and perverse incentives created by drug prohibition can be eliminated through an adult use tolerant dispensary system tightly controlled against access by minors, the age group where 90% of addictions begin. Proposes a scalable, state run system, which can begin with pilot programs in selected counties whose success can be emulated in others and so spread across the country. Qualified adults are allowed to join a confidential program that allows them to purchase drugs and paraphernalia manufactured and dispensed under FDA regulations, at below street prices. Purchase is through a tightly controlled remote ordering/delivery system, preventing access by minors. To qualify, users commit to regular contact with counselor/monitors, or "coaches". The coaches maintain contact with the users to promote responsible use, to keep them informed of current drug information and risks, and to

serve as helpful confidants when someone signals a readiness to discuss rehab. The book shows how this system will1. Increase users' willingness and ability to seek abstinence over time and at a pace commensurate with their individual circumstances and conditions;2. Employ market forces to destroy the business of the pervasive drug dealers and violent traffickers; 3. End the accessibility to drugs of teens and preteens;4. Improve health and safety in our communities; and5. Release tax dollars (criminal justice costs) for better purposes, including education and addiction treatment.6. Provide a solution to the opioid overdose and death epidemic by furnishing users with safely compounded drugs certified as to purity and potency. Most drug users eventually quit on their own without treatment. Many more will, given the chance, seek treatment in support groups and professional rehab centers. In this use tolerant program with information rich counseling and controls against irresponsible use, the natural maturing toward quitting can be encouraged and even accelerated. The myriad details necessary to make such a plan work properly and its benefits are presented. A collateral and major benefit of killing the drug trade through natural market forces, as described, is the curtailment of the illicit drug trade and its associated crime and violence, and a reduction in prison populations and related costs. Of even greater importance is the protection against access to drugs by minors, which has been shown infeasible in a system of prohibition. Legal markets can be controlled, where powerful illegal trafficking cannot be. It is critically important to society that we end access to drugs by minors, which sets so many on a course of idleness and crime.

Amer Soc of Health System

It has, improbably, been called uncommonly lucid, even riveting by The New York Times,

and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States—which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean—it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts—it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7—it is nevertheless an essential record of one of the most transformational events of modern times.

Educate yourself about any condition you might have and the treatments from both the Western and holistic points of view. Use both to heal yourself. Like the golden mean, excess in anything is not good for you. Use generic as opposed to brand name drugs to save money. They're drugs whose patent has run out so now anybody can produce them. The original company keeps the right to its brand

name so when the doctor writes out your prescription, ask him to write out the generic name of the drug, if applicable as opposed to the brand name which many do, probably because of habit or they get some form of favor from that company. Not all drugs are manufactured in a generic version. The major points of medical drug use are: Know the drug you're using. If it doesn't work, ask for another drug that does the same function. There are many different drugs that treat the same diseases. Follow the dosage instructions. Throw old drugs away.
