This book takes a fresh look at programs for advanced studies for high school students in the United States, with a particular focus on the Advanced Placement and the International Baccalaureate programs, and asks how advanced studies can be significantly improved in general. It also examines two of the core issues surrounding these programs: they can have a profound impact on other components of the education system and participation in the programs has become key to admission at selective institutions of higher education. By looking at what could enhance the quality of high school advanced study programs as well as what precedes and comes after these programs, this report provides teachers, parents, curriculum developers, administrators, college science and mathematics faculty, and the educational research community with a detailed assessment that can be used to guide change within advanced study programs.

This book is intended to help
candidates prepare for
entrance examinations in
mathematics and scientific
subjects, including STEP
(Sixth Term Examination
Paper). STEP is an
examination used by Cambridge
colleges as the basis for
conditional offers. They are
also used by Warwick
University, and many other
mathematics departments
recommend that their
applicants practice on the
past papers even if they do
not take the examination.
Advanced Problems in
Mathematics is recommended as
preparation for any
undergraduate mathematics
course, even for students who
do not plan to take the Sixth
Term Examination Paper. The
questions analysed in this
book are all based on recent

STEP questions selected to address the syllabus for Papers I and II, which is the A-level core (i.e. C1 to C4) with a few additions. Each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must read for any student wishing to apply to scientific subjects at university level and for anybody interested in advanced mathematics.
