GLOBE BESTSELLER •

One of the most acclaimed books of our time: an unforgettable memoir about a young woman who, kept out of school, leaves her survivalist family and goes on to earn a PhD from Cambridge University “Extraordinary . . . an act of courage and self-invention.”—The New York Times NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW • ONE OF PRESIDENT BARACK OBAMA’S FAVORITE

BOOKS OF THE YEAR • BILL GATES’S HOLIDAY READING LIST • FINALIST: National Book Critics Circle’s Award In Autobiography and John Leonard Prize For Best First Book • PEN/Jean Stein Book Award • Los Angeles Times Book Prize Born to survivalists in the mountains of Idaho, Tara Westover was seventeen the first time she set foot in a classroom. Her family was so isolated from mainstream society that there was no one to ensure the children received an

education, and no one to intervene when one of Tara's older brothers became violent. When another brother got himself into college, Tara decided to try a new kind of life. Her quest for knowledge transformed her, taking her over oceans and across continents, to Harvard and to Cambridge University. Only then would she wonder if she'd traveled too far, if there was still a way home. "Beautiful and propulsive . . . Despite the singularity of [Westover's] childhood, the questions her

book poses are universal: How much of ourselves should we give to those we love? And how much must we betray them to grow up?"—Vogue NAMED ONE OF THE BEST BOOKS OF THE YEAR BY The Washington Post • O: The Oprah Magazine • Time • NPR • Good Morning America • San Francisco Chronicle • The Guardian • The Economist • Financial Times • Newsday • New York Post • theSkimm • Refinery29 • Bloomberg • Self • Real Simple • Town &

This book focuses on the Gordian knot of our time, the closely coupled problems of electricity

poverty for billions of humans, and global warming for all humans. The central thesis of the book is that nuclear power is not only the only solution, it is a highly desirable solution, cheaper, safer, less intrusive on nature than all the alternatives. Just about everybody, including most pro-nuclear folks, accept the fact that nuclear electricity is inherently expensive. Nuclear power is not inherently expensive. It is

inherently cheap. This book argues that conventional nuclear power should cost less than three cents per kilowatt hour. But nuclear power is expensive, prohibitively so in most parts of the planet. The reason why nuclear power is so expensive is a regulatory regime in which the regulator is mandated to increase costs to the point where nuclear power is at best barely economic. The operative buzzword is ALARA, As Low As

Reasonably Achievable. In such a system, any technological improvement which should lower cost simply provides regulators with more room to drive costs up. This same regime does an excellent job of stifling competition and technological progress by erecting layers of barriers to entry. The goal is not just to make nuclear electricity as cheap as coal or gas fired electricity. The goal must be to keep pushing the cost of nuclear power

down and down, allowing us to replace fossil fuels almost everywhere. Imagine what we could do with 2 cents per kWh power in electrifying transportation and producing carbon neutral synfuels. This can only be done in a harshly competitive environment. We must force the providers of nuclear power to compete with everybody. If nuclear power is to be allowed to cleave the Gordian knot of electricity poverty and

global warming, then we must completely change the way we regulate nuclear electricity. This book makes the case for this change and outlines what the replacement system needs to look like.

Papers from a flagship conference reflect the latest developments in the field, including work in such rapidly advancing areas as human-robot interaction and formal methods. Robotics: Science and Systems VIII

spans a wide spectrum of robotics, bringing together contributions from researchers working on the mathematical foundations of robotics, robotics applications, and analysis of robotics systems. This volume presents the proceedings of the eighth annual Robotics: Science and Systems (RSS) conference, held in July 2012 at the University of Sydney. The contributions reflect the exciting diversity of the field,

presenting the best, the newest, and the most challenging work on such topics as mechanisms, kinematics, dynamics and control, human-robot interaction and human-centered systems, distributed systems, mobile systems and mobility, manipulation, field robotics, medical robotics, biological robotics, robot perception, and estimation and learning in robotic systems. The conference and its proceedings reflect

not only the tremendous growth of robotics as a discipline but also the desire in the robotics community for a flagship event at which the best of the research in the field can be presented.

A funny, moving, and true story of an ordinary boy with an extraordinary face that's perfect for fans of *Wonder*—now available in the U.S. When Robert Hoge was born, he had a tumor

the size of a tennis ball in the middle of his face and short, twisted legs. Surgeons removed the tumor and made him a new nose from one of his toes. Amazingly, he survived—with a face that would never be the same. Strangers stared at him. Kids called him names, and adults could be cruel, too. Everybody seemed to agree that he was “ugly.” But Robert refused to let his face define him. He played pranks, got into trouble, had adventures with his big family, and finally found a sport that was perfect for

him to play. And Robert came face to face with the biggest decision of his life, he followed his heart. This poignant memoir about overcoming bullying and thriving with disabilities shows that what makes us “ugly” also makes us who we are. It features a reflective foil cover and black-and-white illustrations throughout.
