The announcement of a hydrogen fuel initiative in the President's 2003 State of the Union speech substantially increased interest in the potential for hydrogen to play a major role in the nation's long-term energy future. Prior to that event, DOE asked the National Research Council to examine key technical issues about the hydrogen economy to assist in the development of its hydrogen R&D program. Included in the assessment were the current state of technology; future cost

estimates; CO2 emissions; distribution, storage, and end use considerations; and the DOE RD&D program. The report provides an assessment of hydrogen as a fuel in the nation's future energy economy and describes a number of important challenges that must be overcome if it is to make a major energy contribution. Topics covered include the hydrogen end-use technologies, transportation, hydrogen production technologies, and transition issues for hydrogen in vehicles.

Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.

Drawing from Buddhist and yogic precepts, this practical guide offers tools for becoming a better, more compassionate communicator at home, at work, and in the world. Have you ever tried to tell someone what you want only to feel misunderstood and frustrated? Or hesitated to ask for what you needed because you didn't want to burden the other person? Or been stuck in blame or anger that wouldn't go away? Judith and Ike Lasater, long-term students of yoga and Buddhism, experienced dilemmas like these, too. Even though they had studied the yoga principle of satya (truth) and the Buddhist precept of right speech, it was not until they began practicing Marshall Rosenberg's techniques of Nonviolent Communication (NVC) that they understood how to live satya and right speech. In *What We Say Matters*, Judith and Ike describe their journey through NVC and how speech becomes a spiritual practice based on giving and receiving with compassion—everywhere, all the time—whether at home, at work, or in the world. Their writing is deeply personal, punctuated by their recounts of trial and error, success and failure, laughter and challenge—even in writing this book! They guide you through an introduction to NVC with clear explanations, poignant examples, suggested exercises, and helpful resources. With practice, you'll learn

new ways to: • Extend empathy to yourself and others • Distinguish between feelings and needs • Make requests rather than demands • Choose connection over conflict • Create mutually satisfying outcomes

Introduction to Business Plunkett Research, Ltd.

Ford FE engines, which were manufactured from the late 1950s all the way through the mid-1970s, were designated as the large-displacement engines in the Ford lineup. FE means Ford Edsel, and reflects an era when Ford sought to promote the Edsel name. The design of these engines was implemented to increase displacement over its predecessor, the Y-Block engines of the previous decade. Early models were fairly modest in displacement, as were most big-blocks of the era, but they grew quickly to fill the needs of rapidly changing chassis requirements and consumer demand for larger vehicles. As it grew, the FE engine performed admirably as a heavy passenger car and light truck engine. It also became quite accomplished in performance circles, winning the 24 Hours of Le Mans, as well as powering Ford's muscle car and drag racing programs in the mid- to late 1960s. In this book, you will learn everything you need to know to rebuild one of these legendary engines. CarTech's unique Workbench series format takes you step-by-step through the entire rebuilding process. Covered are engine identification and selection, disassembly, cleaning, parts analysis and assessment, machine shop processes, replacement parts selection, re-

assembly and start-up/break-in techniques. Along the way you find helpful tips on performance upgrades, trouble spots to look for, special tools required, and professional builder's tips. FE master, owner of Survival Motorsports, and veteran author Barry Rabotnick shares all of his tricks and secrets on building a durable and reliable FE engine. Whether you are simply rebuilding an old truck for reliable service use, restoring a 100-point show car, or building the foundation for a high-performance street and strip machine, this book will be an irreplaceable resource for all your future FE engine projects.
