User's Guide Kenneth Gibson  
How can we think of life in its dual expression, matter and experience, the living and the lived? Philosophers and, more recently, social scientists have offered multiple answers to this question, often privileging one expression or the other –

the biological or the biographical. But is it possible to conceive of them together and thus reconcile naturalist and humanist approaches? Using research conducted on three continents and engaging in critical dialogue with Wittgenstein, Benjamin, and Foucault, Didier Fassin attempts to do so by developing three concepts: forms of life, ethics of life, and politics of life. In the conditions of refugees and asylum seekers, in the light of mortality statistics and death benefits, and via a genealogical and ethnographical inquiry, the moral economy of life reveals troubling tensions in the way contemporary societies treat human beings. Once the pieces of this anthropological composition are assembled, like in Georges Perec's jigsaw puzzle, an image appears: that of unequal lives.

In this book, Warren Keller reveals the secrets of astro-image processing software PixInsight in a practical and easy to follow manner, allowing the reader to produce stunning astrophotographs from even mediocre data. As the first comprehensive post-processing platform

to be created by astro-imagers for astro-imagers, it has for many, replaced the generic graphics editors as the software of choice. With clear instructions from Keller, astrophotographers can get the most from its tools to create amazing images. Capable of complex post-processing routines, PixInsight is also an advanced pre-processing software, through which astrophotographers calibrate and stack their exposures into completed master files. Although it is extremely powerful, PixInsight has been inadequately documented in print--until now. With screenshots to help illustrate the process, it is a vital guide.
