There is now a widespread interest in reuse in many domains, from opera houses built over old warehouses, to vintage clothes and everyday goods incorporating repurposed materials or parts. Despite its ubiquity, this extensive creative work is typically seen in narrowly environmental terms, as a means of reducing carbon, resource use or waste. However, as this volume shows, reuse also has aesthetic and cultural dimensions and a rich social currency, invoked to consciously subvert the accelerated consumer culture responsible for our unfolding environmental crisis. In three parts, the essays in this book consider reuse in terms of values, aesthetics and

meaning, its application in contemporary urban and spatial settings, and the revival of social practices involving a more conscious recourse to reuse and repair. These are bookended by the editors' essays: the first, on the significant relationship between reuse and technological and social acceleration evident in the surrounding consumer society; and the last, on the multiple forms of reuse deployed in a contemporary alternative building practice, and their contributions to presenting alternative ways of living in the world. Challenging dominant understandings of 'waste' and 'consumption', *Subverting Consumerism* shows how reuse has become a means for many to creatively engage with the past, and to discover a continuity and sense of place eroded by the accelerative regimes of contemporary consumerism. Becoming a means of resistance, and offering a range of aesthetic, social and economic possibilities, reuse can be found to subvert and challenge the obsessive quest for the new found in contemporary consumerism.

An examination of the global trade and traffic in discarded electronics that reframes the question of the "right" thing to do with e-waste. The prevailing storyline about the problem of electronic waste frames e-waste as generated by consumers in developed countries and dumped on people and places in developing countries. In Reassembling Rubbish, Josh Lepawsky offers a different view. In an innovative analysis of the global trade and traffic in discarded electronics, Lepawsky reframes the question of the "right" thing to do with e-waste, mapping the complex flows of electronic materials. He counters the assumption that e-waste is a post-consumer problem, pointing out that waste occurs at all stages of electronic materials' existence, and calls attention to the under-researched world of reuse and repair. Lepawsky explains that there are conflicting legal distinctions between electronic waste and non-waste, and examines a legal case that illustrates the consequences. He shows that patterns of trade do not support the dominant narrative of e-waste dumping but rather represent the dynamic ecologies of repair, refurbishment, and materials recovery. He asks how we know waste, how we measure it, and how we construe it, and how this affects our efforts to mitigate it. We might not put so much faith in household recycling if we counted the more massive amounts of pre-consumer electronic waste as official e-waste. Lepawsky charts the "minescapes," "productionscapes," and "clickscapes" of electronics, and

the uneven “ discardscapes ” they produce. Finally, he considers both conventional and unconventional e-waste solutions, including decriminalizing export for reuse, repair, and upgrade; enabling ethical trade in electronics reuse, repair, refurbishment, and recycling; implementing extended producer responsibility; and instituting robust forms of public oversight.
