The powerful ways the metals we need to fuel technology and energy are spawning environmental havoc, political upheaval, and rising violence — and how we can do better. An Australian millionaire 's plan to mine the ocean floor. Nigerian garbage pickers risking their lives to salvage e-waste. A Bill Gates-backed entrepreneur harnessing AI to find metals in the Arctic. These people and millions more are part of the intensifying competition to find and extract the minerals essential for two crucial technologies: the internet and renewable energy. In *Power Metal*, Vince Beiser explores the Achilles ' heel of "green power" and digital technology — that manufacturing computers, cell phones, electric cars, and other technologies demand skyrocketing amounts of lithium, copper, cobalt, and other materials. Around the world, businesses and governments are scrambling for new places and new ways to get those metals, at enormous cost to people and the planet. Beiser crisscrossed the world to talk to the people involved and report on the damage this race is inflicting, the ways it could get worse, and how we can minimize the damage. *Power Metal* is a compelling glimpse into this disturbing yet potentially promising new world.

The United Nations has reported that the world is on track to produce over 180 billion pounds of electronic waste (e-waste) by 2030. This tidal wave of discarded electronic products, including cellular phones, laptop and desktop computers, televisions, solar panels, major household appliances, and telecommunications equipment, poses a host of serious environmental and public health problems and challenges. *Electronic Waste: A Reference Handbook* provides readers with an illuminating survey of the myriad issues and controversies surrounding the collection, treatment, disposal, and recycling of electric and electronic products, including trends and challenges related to public health, social justice, and environmental protection and stewardship. Waste to Wealth Penguin

There is now a widespread interest in reuse in many domains, from opera houses built over old warehouses, to vintage clothes and everyday goods incorporating repurposed materials or parts. Despite its ubiquity, this extensive creative work is typically seen in narrowly environmental terms, as a means of reducing carbon, resource use or waste. However, as this volume shows, reuse also has aesthetic and cultural dimensions and a rich social currency, invoked to consciously subvert the accelerated consumer culture responsible for our unfolding environmental crisis. In three parts, the essays in this book consider reuse in terms of values, aesthetics and meaning, its application in contemporary urban and spatial settings, and the revival of social practices involving a more conscious recourse to reuse and repair. These are bookended by the editors' essays: the first, on the significant relationship between reuse and technological and social acceleration evident in the surrounding consumer society; and the last, on the multiple forms of reuse deployed in a contemporary alternative building practice, and their contributions to presenting alternative ways of living in the world. Challenging dominant understandings of 'waste' and 'consumption', *Subverting Consumerism* shows how reuse has become a means for many to creatively engage with the past, and to discover a continuity and sense of place eroded by the accelerative regimes of contemporary consumerism. Becoming a means of resistance, and offering a range of aesthetic, social and economic possibilities, reuse can be found to subvert and challenge the obsessive quest for the new found in contemporary consumerism.
