Classic Books Library presents this brand new edition of "The Federalist Papers", a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. "The Federalist", as it was previously known, was constructed by American statesman Alexander Hamilton, and was intended to catalyze the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755-1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800 and founded the Federalist Party, the system that governed the nation's finances. His contributions to the Constitution and leadership made a significant and lasting impact on the early development of the nation of the United States.

How students get the materials they need as opportunities for higher education expand but funding shrinks. From the top down, Shadow Libraries explores the institutions that shape the provision of educational materials, from the formal sector of universities and publishers to the broadly informal ones organized by faculty, copy shops, student unions, and students themselves. It looks at the history of policy battles over

access to education in the post-World War II era and at the narrower versions that have played out in relation to research and textbooks, from library policies to book subsidies to, more recently, the several "open" publication models that have emerged in the higher education sector. From the bottom up, Shadow Libraries explores how, simply, students get the materials they need. It maps the ubiquitous practice of photocopying and what are--in many cases--the more marginal ones of buying books, visiting libraries, and downloading from unauthorized sources. It looks at the informal networks that emerge in many contexts to share materials, from face-to-face student networks to Facebook groups, and at the processes that lead to the consolidation of some of those efforts into more organized archives that circulate offline and sometimes online--the shadow libraries of the title. If Alexandra Elbakyan's Sci-Hub is the largest of these efforts to date, the more characteristic part of her story is the prologue: the personal struggle to participate in global scientific and educational communities, and the recourse to a wide array of ad hoc strategies and networks when formal, authorized means are lacking. If Elbakyan's story has struck a chord, it is in part because it brings this contradiction in the academic project into sharp relief--universalist in principle and unequal in practice. Shadow Libraries is a study of that tension in the digital era. With the advent of disruptive digital technologies, companies are facing unprecedented challenges and opportunities. Advanced manufacturing systems are of paramount importance in making key enabling technologies and new products more competitive, affordable, and accessible, as well as for fostering their economic and social impact. The manufacturing industry also serves as an innovator for sustainability since automation coupled with advanced manufacturing technologies have helped manufacturing practices transition into the circular economy. To that end, this Special Issue of the journal Applied Sciences, devoted to the broad field of Smart Sustainable Manufacturing Systems, explores recent research into the concepts, methods, tools, and applications for smart sustainable manufacturing, in order to advance and promote the development of modern and intelligent manufacturing systems. In light of the above, this Special Issue is a collection of the latest research on relevant topics and addresses the current challenging issues associated with the introduction of smart sustainable manufacturing systems. Various topics have been addressed in this Special Issue, which focuses on the design of sustainable production systems and factories; industrial big data analytics and cyberphysical systems; intelligent maintenance approaches and technologies for increased operating life of production systems; zero-defect manufacturing strategies, tools and methods towards online production management; and connected smart factories.

There has been an enormous increase in interest in the use of evidence for public policymaking, but the vast majority of work on the subject has failed to engage with the political nature of decision making and how this influences the ways in which evidence will be used (or misused) within political areas. This book provides new insights into the nature of political bias with regards to evidence and critically considers what an 'improved' use of evidence would look like from a policymaking perspective. Part I describes the great potential for evidence to help achieve social goals, as well as the challenges raised by the political nature of policymaking. It explores the concern of evidence advocates that political interests drive the misuse or manipulation of evidence, as well as counter-concerns of critical policy scholars about how appeals to 'evidence-based policy' can depoliticise political debates. Both concerns reflect forms of bias - the first representing technical bias, whereby evidence use violates principles of scientific best practice, and the second representing issue bias in how appeals to evidence can shift political debates to particular questions or marginalise policy-relevant social concerns. Part II then draws on the fields of policy studies and cognitive psychology to understand the origins and mechanisms of

both forms of bias in relation to political interests and values. It illustrates how such biases are not only common, but can be much more predictable once we recognise their origins and manifestations in policy arenas. Finally, Part III discusses ways to move forward for those seeking to improve the use of evidence in public policymaking. It explores what constitutes 'good evidence for policy', as well as the 'good use of evidence' within policy processes, and considers how to build evidence-advisory institutions that embed key principles of both scientific good practice and democratic representation. Taken as a whole, the approach promoted is termed the 'good governance of evidence' - a concept that represents the use of rigorous, systematic and technically valid pieces of evidence within decision-making processes that are representative of, and accountable to, populations served.

The field of Byzantine jewellery (4th-15th centuries) is a rapidly expanding one and a large amount of important research has been conducted within the last ten years, both by scholars on the continent and in America. The intention of the conference, and subsequently the volume, is to draw together the many strands involved in this research and to publish them in accessible form. This volume represents a rare opportunity to make this crucial work available to a much wider specialist and non-specialist audience in Britain (and beyond). In particular the topics to be addressed by foreign speakers are either not well-known in Britain or are published in largely inaccessible journals. Chris Entwistle has been the curator of the Late Roman and Byzantine Collections at the British Museum since 1985. Dr Noël Adams is an independent scholar who has published widely on the metalwork and jewellery of the Early Middle Ages.

This book explores the emergence and development of the legal concept of fair and equitable benefit-sharing, and its application in agriculture. Developed in the 1990s, the concept of fair and equitable benefit-sharing has been deployed in an ever-wider variety of international instruments, including those on biodiversity, climate change and human rights. A lack of clarity persists, however, on what fair and equitable benefit-sharing requires and entails, and whether its implementation supports or eventually undermines equity and justice. This book examines these questions in the area of land, food and agriculture, addressing for the first time several instances of the agricultural production chain, including research and development, land governance and land use and access to markets. It identifies challenges regarding implementation of the concept as enshrined in environmental treaties and soft-law

instruments, with a focus on the International Treaty on Plant Genetic Resources for Food and Agriculture, the Voluntary Guidelines on Tenure and the UN Declaration on the Rights of Peasants. It investigates its role, enabling conditions and limitations, in a contradictory policy context involving environmental, food security and human rights objectives but also a growing web of multilateral and bilateral trade and investment agreements. Linking international law research with a socio-legal analysis, the book addresses four grassroots examples, which offer ideas for institutional and legal innovation from the local to the global level. This interdisciplinary title will be of great interest to students and scholars of international environmental law, agriculture, land law, development studies and global governance, as well as policymakers and practitioners working in these fields.
