What if you could reduce your parenting stress AND nurture your child's emotional development at the same time? Conventional wisdom teaches us to put our children's needs above our own. Our worth as parents is often judged by how much we sacrifice for the good of our children rather than how happy and well-adjusted they are. In "Go Take a Bath!," licensed psychotherapist and parenting coach Robin Kevles-Necowitz suggests that we invert this modern-day standard. She advises us to make parents, not children, our top priority, in much the same way that flight attendants instruct us to put on our own oxygen masks before assisting others. The typical "kids-first" approach is not only destructive for parents and marriages, she says, but also damages our children emotionally by setting them up for a lifetime of anxiety, feelings of inadequacy, and low self-esteem. But by placing our needs above our children's, we offer a living example of what a balanced, healthy, full adult life looks like. Kevles-Necowitz proposes a powerful self-care model, which fosters a happier home and the blossoming of independent, self-sufficient, confident children. The idea is to indulge our need to relax, have fun, eat well, and enjoy our whole lives-not just our parenting side. This new paradigm requires that we sit back, refrain from trying to "fix" everything, and allow our children to manage more of the day-to-day dramas that arise. As a result, they learn life skills, and we get to enjoy parenting more. Of course, this approach generates new anxieties that we must learn to manage. For that, Kevles-Necowitz recommends that you "Go Take a Bath!"

Knowing is less about information and more about transformation; less about comprehension and more about being apprehended. This radical book develops the notion of covenant epistemology--an innovative, biblically compatible, holistic, embodied, life-shaping epistemological vision in which all knowing takes the shape of interpersonal, covenantal relationship. Rather than knowing in order to love, we love in order to know. Meek argues that all knowing is best understood as transformative encounter. Creatively blending insights from a diverse range of conversation partners--including Michael Polanyi, Michael D. Williams, Lesslie Newbigin, Parker Palmer, John Macmurray, Martin Buber, and James Loder--Meek offers critically needed "epistemological therapy" in response to the pervasive and damaging presumptions that those in Western culture continue to bring to efforts to know. The book's innovative approach--an unfolding journey of discovery-through-dialogue--itself subverts standard epistemological presumptions of timeless linearity. While it offers a sustained and sophisticated philosophical argument, Loving to Know's texts and textures interweave loosely to effect therapeutic epistemic transformation in the reader.

The Permaculture Handbook John Wiley & Sons

"Mesmerizing & fascinating..." —The Seattle Post-Intelligencer "The Freakonomics of big data." —Stein Kretsinger, founding executive of Advertising.com Award-winning | Used by over 30 universities | Translated into 9 languages An introduction for everyone. In this rich, fascinating — surprisingly accessible — introduction, leading expert Eric Siegel reveals how predictive analytics (aka machine learning) works, and how it affects everyone every day. Rather than a “how to” for hands-on techies, the book serves lay readers and experts alike by covering new case studies and the latest state-of-the-art techniques. Prediction is booming. It reinvents industries and runs the world. Companies, governments, law enforcement, hospitals, and universities are seizing upon the power. These institutions predict whether you're going to click, buy, lie, or die. Why? For good reason: predicting human behavior combats risk, boosts sales, fortifies healthcare, streamlines manufacturing, conquers spam, optimizes social networks, toughens crime fighting, and wins elections. How? Prediction is powered by the world's most potent, flourishing unnatural resource: data. Accumulated in large part as the by-product of routine tasks, data is the unsalted, flavorless residue deposited en masse as organizations churn away. Surprise! This heap of refuse is a gold mine. Big data embodies an extraordinary wealth of experience from which to learn. Predictive analytics (aka machine learning) unleashes the power of data. With this technology, the computer literally learns from data how to predict the future behavior of individuals. Perfect prediction is not possible, but putting odds on the future drives millions of decisions more effectively, determining whom to call, mail, investigate, incarcerate, set up on a date, or medicate. In this lucid, captivating introduction — now in its Revised and Updated edition — former Columbia University professor and Predictive Analytics World founder Eric Siegel reveals the power and perils of prediction: What type of mortgage risk Chase Bank predicted before the recession. Predicting which people will drop out of school, cancel a subscription, or get divorced before they even know it themselves. Why early retirement predicts a shorter life expectancy and vegetarians miss fewer flights. Five reasons why organizations predict death — including one health insurance company. How U.S. Bank and Obama for America calculated the way to most strongly persuade each individual. Why the NSA wants all your data: machine learning supercomputers to fight terrorism. How IBM's Watson computer used predictive modeling to answer questions and beat the human champs on TV's Jeopardy! How companies ascertain untold, private truths — how Target figures out you're pregnant and Hewlett-Packard deduces you're about to quit your job. How judges and parole boards rely on crime-predicting computers to decide how long convicts remain in prison. 182 examples from Airbnb, the BBC, Citibank, ConEd, Facebook, Ford, Google, the IRS, LinkedIn, Match.com, MTV, Netflix, PayPal, Pfizer, Spotify, Uber, UPS, Wikipedia, and more. How does predictive analytics work? This jam-packed book satisfies by demystifying the intriguing science under the hood. For future hands-on practitioners pursuing a career in the field, it sets a strong foundation, delivers the prerequisite knowledge, and whets your appetite for more. A truly omnipresent science, predictive analytics constantly affects our daily lives. Whether you are a consumer of it — or consumed by it — get a handle on the power of Predictive Analytics.

In this volume of 15 articles, contributors from a wide range of disciplines present their analyses of Disney movies and Disney music, which are mainstays of popular culture. The power of the Disney brand has heightened the need for academics to question whether Disney ' s films and music function as a tool of the Western elite that shapes the views of those less empowered. Given its global reach, how the Walt Disney Company handles the role of race, gender, and sexuality in social structural inequality merits serious reflection according to a number of the articles in the volume. On the other hand, other authors argue that Disney productions can help individuals cope with difficult situations or embrace progressive thinking. The different approaches to the assessment of Disney films as cultural artifacts also vary according to the theoretical perspectives guiding the interpretation of both overt and latent symbolic meaning in the movies. The authors of the 15 articles encourage readers to engage with the material, showcasing a variety of views about the good, the bad, and the best way forward.
