There is a wealth of research and literature explaining suburban sprawl and the urgent need to retrofit suburbia. However, until now there has been no single guide that directly explains how to repair typical sprawl elements. The Sprawl Repair Manual demonstrates a step-by-step design process for the re-balancing and re-urbanization of suburbia into more sustainable, economical, energy- and resource-efficient patterns, from the region and the community to the block and the individual building. As Galina Tachieva asserts in this exceptionally useful book, sprawl repair will require a proactive and aggressive approach, focused on design, regulation and incentives. The Sprawl Repair Manual is a much-needed, single-volume reference for fixing sprawl, incorporating changes into the regulatory system, and implementing repairs through incentives and permitting strategies. This manual specifies the expertise that 's needed and details the techniques and algorithms of sprawl repair within the context of reducing the financial and ecological footprint of urban growth. The Sprawl Repair Manual draws on more than two decades of practical experience in the field of repairing and building communities to analyze the current pattern of sprawl development, disassemble it into its elemental components, and present a process for transforming them into human-scale, sustainable elements. The techniques are illustrated both two- and three-dimensionally, providing users with clear methodologies for the sprawl repair interventions, some of which are radical, but all of which will produce

positive results.

Problems in Breast Surgery: A Repair Manual is destined to become a valued part of every plastic surgeon and breast surgeon's library. This unique book provides a virtual lifeline for addressing the challenges encountered in aesthetic and reconstructive breast surgery and avoiding possible problems and complications. This is not a traditional technique-oriented textbook; rather, it has a problem focus and provides different solutions for solving complex problems associated with secondary breast surgery. The book begins with chapters on the basic principles of corrective breast surgery and the key anatomic factors and mechanisms of failure that are key to accurate analysis. With this foundation in place, it proceeds to address the spectrum of potential problems that can occur with each of the different procedures, ranging from breast augmentation, reduction, and mastopexy to breast and nipple-areola reconstruction. Each chapter is introduced with a specific problem presented by Drs. Fisher and Handel. Then the second portion of the chapter features a variety of solutions from different experts for treating the problem. These experts provide case examples of similar problems with a step-by-step explanation of how they solved these problems and why they took the approach that they used. The book covers both aesthetic and reconstructive breast surgery. The goal of this text is not to judge which solution is the best (that decision is left to the reader). Rather, it is designed to provide a detailed road map explaining how to move from point A, the problem, to point B, the solution. Beautifully Illustrated Dramatic color illustrations and numerous preoperative, intraoperative, and postoperative images help readers visualize the steps of each operative solution. Unique Features This book's

approach is unique and should be of great educational value to surgeons—both residents and practitioners—in solving challenging problems and complications. Even more important, it will help them avoid problems and complications in future cases.
