Design culture foregrounds the relationships between the domains of design practice, design production and everyday life. Unlike design history and design studies, it is primarily concerned with contemporary design objects and the networks between the multiple actors engaged in their shaping, functioning and reproduction. It acknowledges the rise of design as both a key component and a key challenge of the modern world. Featuring an impressive range of international case studies, Design Culture interrogates what this emergent discipline is, its methodologies, its scope and its relationships with other fields of study. The volume's interdisciplinary approach brings fresh thinking to this fast-evolving field of study.

This book propagates a new way of thinking about managing our resources by integrating the perspectives of complex systems theory and social psychology. By resources, the authors mean objects, such as cell phones and cars, and human resources, such as family members, friends, and the small and large communities they belong to. As we all face the "replace or repair" dichotomy, readers will understand how to repair themselves, their relationships, and communities, accept the "new normal," and contribute to repairing the world. The book is offered to Zoomers, growing up in a world where it seems everything is falling apart; people in their 30s and 40s, who are thinking about how to live a fulfilling life; people from the Boomers generation, who are thinking back on life and how to repair relationships. The Reader will enjoy the intellectual adventure of connecting the natural and social worlds and understanding the transition's pathways from a "throwaway society" to a "repair society."
