Japanese for Busy People is the  
most popular Japanese language  
textbook series in the world. With  
over 20 components including

texts, workbooks, CDs, videos and  
teacher's manuals, it is also one  
of the most comprehensive. Now, a  
decade after its first revision,  
the entire series is being  
redesigned, updated and  
consolidated to meet the needs of  
21st-century students and  
businesspeople who want to learn  
natural, spoken Japanese as  
effectively as possible in a  
limited amount of time. The book  
features not only a sleek, new  
design but also a unit structure  
that groups thematically linked  
lessons together, making it easier  
than ever to learn Japanese.  
Moreover, it now comes with a CD  
containing audio for the dialogues  
and listening exercises from the  
text. The exercises in the book  
have also been thoroughly revised  
to incorporate more comprehension  
and production tasks. Many of these  
exercises are illustrated, making  
for a stimulating learning  
experience, and the purpose of each  
one is clearly stated. This first  
of three volumes introduces  
"survival Japanese"—the absolute  
minimum amount of Japanese needed  
to live in Japan. Thus, the  
vocabulary and grammatical items it  
introduces are limited to about a  
third of what is typically  
introduced in a first-year course.  
In addition, the book features  
notes on Japanese culture intended  
to expand the learner's  
understanding of Japan, its customs  
and people. Japanese for Busy  
People I is available in two  
formats: romanized and kana. The  
Romanized Version uses romanized  
Japanese throughout, with kana in  
the Opening Dialogues of each  
lesson. The Kana Version—exposing  
students to hiragana and katakana  
from the very beginning—uses only

kana. The content of the two books is otherwise exactly the same. The companion volume, *Japanese for Busy People 1: The Workbook for the Revised 3rd Edition* contains a variety of illustrated exercises for mastering the basic sentence patterns presented in the main text.

Lucy Nash has just finished up her sophomore year of high school and is anticipating an uneventful summer at her rural Georgia home. . . that is, until a weird twist of fate and physics takes her on a trip back through time to the year 1975 with Cameron Hall, a boy her age whose own time is thirty years into her future. Cameron is hoping to stop a series of child disappearances, one of which deeply affected his family, and ends up teaming up with his accidental "passenger" to solve the crime. But despite their access to resources from the future, can two teenagers resolve a mystery that has remained a cold case for over sixty years. . . and what impact will their presence in the past have on their own lives - and their own futures?

This book presents up-to-date knowledge on infertility in the context of polycystic ovary syndrome (PCOS) and provides clear evidence-based guidance on its treatment. The book opens by discussing anovulation, oocyte quality, and the endometrium in women with PCOS, infertility and subfertility cofactors, and the impact of PCOS phenotypes on fertility. All aspects of management are then thoroughly addressed. The available medical treatments for PCOS-related infertility - including antiestrogens, aromatase inhibitors, insulin-sensitizing drugs, and gonadotropins - are reviewed, and other potential therapeutic approaches, such as acupuncture and laparoscopic ovarian drilling, are assessed. Careful attention is also devoted to the role of lifestyle interventions. The use of controlled ovarian stimulation in infertile PCOS patients undergoing

intrauterine insemination or in vitro fertilization is examined in detail, as are the benefits of in vitro maturation of oocytes. This book will be of value to all who are involved in the care of women with PCOS and related infertility issues.

*Ocean-Atmosphere Interactions*  
Springer

The oceans and atmosphere interact through various processes, including the transfer of momentum, heat, gases and particles. In this book leading international experts come together to provide a state-of-the-art account of these exchanges and their role in the Earth-system, with particular focus on gases and particles. Chapters in the book cover: i) the ocean-atmosphere exchange of short-lived trace gases; ii) mechanisms and models of interfacial exchange (including transfer velocity parameterisations); iii) ocean-atmosphere exchange of the greenhouse gases carbon dioxide, methane and nitrous oxide; iv) ocean atmosphere exchange of particles and v) current and future data collection and synthesis efforts. The scope of the book extends to the biogeochemical responses to emitted /

deposited material and interactions and feedbacks in the wider Earth-system context. This work constitutes a highly detailed synthesis and reference; of interest to higher-level university students (Masters, PhD) and researchers in ocean-atmosphere interactions and related fields (Earth-system science, marine / atmospheric biogeochemistry / climate). Production of this book was supported and funded by the EU COST Action 735 and coordinated by the International SOLAS (Surface Ocean- Lower Atmosphere Study) project office.

Wageningen Academic

This collection gives broad and up-to-date results in the research and development of materials characterization and processing. Coverage is well-rounded from minerals, metals, and materials characterization and developments in extraction to the fabrication and performance of materials. In addition, topics as varied as structural steels to electronic materials to plant-based composites are explored. The latest research presented in this wide area make this book both timely and relevant to the materials science field as a whole. The book explores scientific processes to characterize materials using modern

technologies, and focuses on the interrelationships and interdependence among processing, structure, properties, and performance of materials. Topics covered include ferrous materials, non-ferrous materials, minerals, ceramics, clays, soft materials, method development, processing, corrosion, welding, solidification, composites, extraction, powders, nanomaterials, advanced materials, and several others.
