'Stimulating and informative. an antidote to the cultural cringe' - Canberra Times
'To be Australian': what can that mean? Inventing Australia sets out to find the answers by tracing the images we have used to describe our land and our people - the convict hell, the workingman's paradise, the Bush legend, the 'typical' Australian from the shearer to the Bondi lifesaver, the land of opportunity, the small rich industrial country, the multicultural society. The book argues that these images, rather than describing an especially Australian reality, grow out of assumptions about nature, race, class, democracy, sex and empire, and are 'invented' to serve the interests of particular groups. There have been many books about Australia's national identity; this is the first to place the discussion within an historical context to explain how Australians' views of themselves change and why these views change in the way they do.

Today, software engineers need to know not only how to program effectively but also how to develop proper engineering practices to make their codebase sustainable and healthy. This book emphasizes this difference between programming and software engineering. How can software engineers manage a living codebase that evolves and responds to changing requirements and demands over the length of its life? Based on their experience at Google, software engineers Titus Winters and Hyrum Wright, along with technical writer Tom Manshreck, present a candid and insightful look at how some of the world's leading practitioners construct and maintain software. This book covers Google's unique engineering culture, processes, and tools and how these aspects contribute to the effectiveness of an engineering organization. You'll explore three fundamental principles that software organizations should keep in mind when designing, architecting, writing, and maintaining code: How time affects the sustainability of software and how to make your code resilient over time How scale affects the viability of software practices within an engineering organization What trade-offs a typical engineer needs to make when evaluating design and development decisions
