Consciousness, 'the last great mystery for science', remains a hot topic. How can a physical brain create our experience of the world? What creates our identity? Do we really have free will? Could consciousness itself be an illusion? Exciting new developments in brain science are continuing the debates on these issues, and the field has now expanded to include biologists, neuroscientists, psychologists, and philosophers. This controversial book clarifies the potentially confusing arguments, and the major theories, whilst also outlining the amazing pace of discoveries in neuroscience. Covering areas such as the construction of self in the brain, mechanisms of attention, the neural correlates of consciousness, and the physiology of altered states of consciousness, Susan Blackmore highlights our latest findings. The philosophy of Friedrich Nietzsche (1844-1900) was almost wholly neglected during his sane life, which came to an abrupt end in 1889. Since then he has been appropriated as an icon by an

astonishingly diverse spectrum of people, whose interpretations of his thought range from the highly irrational to the firmly analytical. Thus Spoke Zarathustra introduced the 'superman' and The Twilight of the Idols developed the 'Will to Power' concept; these term, together with 'Sklavenmoral' and 'Herrenmoral', became confused with the rise of nationalism in Germany. Idiosyncratic and aphoristic, Nietzsche is always bracing and provocative, and temptingly easy to dip into. Michael Tanner's readable introduction to the philosopher's life and work examines the numerous ambiguities inherent in his writings. It also explodes the many misconceptions fostered in the hundred years since Nietzsche wrote, prophetically: 'Do not, above all, confound me with what I am not!' Antisemitism, as hatred of Jews and Judaism, has been a central problem of Western civilization for millennia, and its history continues to invite debate. This Very Short

Introduction untangles the history of the phenomenon, from ancient religious conflict to 'new' antisemitism in the 21st century. Steven Beller reveals how Antisemitism grew as a political and ideological movement in the 19th century, how it reached its dark apogee in the worst genocide in modern history - the Holocaust - and how Antisemitism still persists around the world today. In the new edition of this thought-provoking Very Short Introduction, Beller brings his examination of this complex and still controversial issue up to date with a discussion of Antisemitism in light of the 2008 financial crash, the Arab Spring, and the on-going crisis between Israel and Palestine. Since its inception, psychoanalysis has been hailed as a revolutionary theory of how the mind works, whilst some of its ideas such as the Oedipus complex have become part of everyday conversation. In *Psychoanalysis: A Very Short Introduction*, Daniel Pick offers a lucid, lively, and wide-ranging survey of psychoanalysis. This book offers the reader a flavour of what it might be like to enter treatment, and suggests the possible surprises that can await both analyst and patient, as well as the potential benefits. Yet whilst Freud's writings have shaped the way many of us understand dreams, desires, and destructiveness, as well as anxieties, blunders, and guilt, numerous critics have warned of the dangerous methods and time-bound assumptions of psychoanalysis, doubted the efficacy of its drawn-

out methods, and dismissed its core claims as pseudo-science. Looking at modern ideas of the self, exploring the nature of unconscious aspects of relationships, and considering how psychoanalysis has evolved, Pick ponders the particular challenges now facing the analytic profession, and shows why psychoanalysis remains an important resource for investigating the mind, its creative functioning and many afflictions. The avant-garde movements of Dada and Surrealism continue to have a huge influence on cultural practice, especially in contemporary art, with its obsession with sexuality, fetishism, and shock tactics. In this new treatment of the subject, Hopkins focuses on the many debates surrounding these movements: the Marquis de Sade's Surrealist deification, issues of quality (How good is Dali?), the idea of the 'readymade', attitudes towards the city, the impact of Freud, attitudes to women, fetishism, and primitivism. The international nature of these movements is examined, covering the cities of Zurich, New York, Berlin, Cologne, Barcelona, Paris, London, and recently discovered examples in Eastern Europe. Hopkins explores the huge range of media employed by both Dada and Surrealism (collage, painting, found objects, performance art, photography, film) , whilst at the same time establishing the aesthetic differences between the movements. He also examines the Dadaist obsession with the body-as-mechanism in relation to the Surrealists' return to the fetishized/eroticized body.
