A warm, sunny, beautiful Sunday, July 2, 2017, morning departure from our home and loving dog, Cody, and the scenic hills of southwestern Pennsylvania in Somerset County placed us on a collision course with the imminent sixty-second farewell on Reception Day, July 3, 2017, at West Point for our Class of 2021 son—Nate. The Adventures of Cadet Cody story comes to life in the summer weeks of July and August 2017 during the exchange of letters to our soon-to-be Plebe. photovoltaics (PVs) and PV systems, advances in PVs, charge controllers, inverters, batteries, and generators, as well as the installation and maintenance of a PV system. This book is written for the layperson and is designed to raise the solar electricity literacy of readers. It provides a great overview of the many options available and is designed to help homeowners make wise decisions during the design, purchase, and installation of solar electric systems—and save a lot of money. Providing readers with the knowledge necessary to communicate effectively with PV installers, *Power From the Sun* is a great guide for homeowners, business owners, installers, architects, building department officials, utility company employees, and just about anyone else who wants to lower their energy bills or achieve greater energy independence. Dan Chiras is president of Sustainable Systems Design, Inc., a residential renewable energy and green building consulting firm, and is director of The Evergreen Institute 's Center for

Renewable Energy and Green Building, which offers workshops on residential renewable energy and green building. He is an internationally acclaimed speaker and author and has published twenty-five books, including *The Homeowner 's Guide to Renewable Energy and Power from the Wind*. Popular Science Gibbs Smith This book examines manufactured waste and remaindered humans in literary critiques of capitalism by twentieth-century writers associated with the historical avant-garde and their descendants. Building on recent work in new materialism and waste studies, Rachele Dini reads waste as a process or phase amenable to interruption. From an initial exploration of waste and reuse in three Surrealist texts by Giorgio de Chirico, André Breton, and Mina Loy, Dini traces the conceptualization of waste in the writing of Samuel Beckett, Donald Barthelme, J.G. Ballard, William Gaddis, and Don DeLillo. In exploring the relationship between waste, capitalism, and literary experimentation, this book shows that the legacy of the historical avant-garde is bound up with an enduring faith in the radical potential

of waste. The first study to focus specifically on waste in the twentieth-century imagination, this is a valuable contribution to the expanding field of waste studies.

There is widespread interest throughout the world in improving appliance energy efficiency. Methods to reach that end include energy labeling, energy efficiency standards and market conditioning (e.g, energy efficient procurement and DSM programs). Energy efficiency standards, which started out as an action to reduce demand for energy in individual countries, has now become a subject of regional and even worldwide dimension, particularly in the context of global climate change mitigation. Mandatory energy efficiency standards are in place for some appliances in China, Canada, Mexico, the Philippines and the United States. Standards for refrigerator/freezers

will take effect in Australia and the European Union in 1999. Voluntary energy efficiency standards are in place for refrigerators in Brazil, India and Korea and for air conditioners in India, Japan and Korea. Table I showed potential global energy use reductions from codes and standards in buildings. If individual country data can be assembled, a more accurate approach to estimating potential reductions in energy use and carbon emissions would be to perform a bottom-up analysis for energy using equipment on an end-use basis in as many large developing countries as possible. The impact of standards would be assessed as more efficient appliances replaced existing stock models and new purchases that increased saturation rates were made at higher efficiencies than would otherwise be the case. This approach would show the slow but steady buildup of annual energy savings

from efficiency standards or other programs to improve energy efficiency.
