From The New York Times bestselling author of THE ORGANIZED MIND and THIS IS YOUR BRAIN ON MUSIC, a primer to the critical thinking that is more necessary now than ever. This deluxe eBook features six videos from Daniel Levitin, with more examples, anecdotes, and added visual guides. We are bombarded with more information each day than our brains can process—especially in election season. It's raining bad data, half-truths, and even outright lies. New York Times bestselling author Daniel J. Levitin shows how to recognize misleading announcements, statistics, graphs, and written reports revealing the ways lying weasels can use them. It's becoming harder to separate the wheat from the digital chaff. How do we distinguish misinformation, pseudo-facts, distortions, and outright lies from reliable information? Levitin groups his field guide into two categories—statistical information and faulty arguments—ultimately showing how science is the bedrock of critical thinking. Infoliteracy means understanding that there are hierarchies of source quality and bias that variously distort our information feeds via every media channel, including social media. We may expect newspapers, bloggers, the government, and Wikipedia to be factually and logically correct, but they so often aren't. We need to think critically about the words and numbers we encounter if we want to be successful at work, at play, and in making the most of our lives. This means checking the plausibility and reasoning—not passively accepting information, repeating it, and making decisions based on it. Readers learn to avoid the extremes of passive gullibility and cynical rejection. Levitin's charming, entertaining,

accessible guide can help anyone wake up to a whole lot of things that aren't so. And catch some lying weasels in their tracks!

Ian Adams is perhaps the best-known landscape photographer in Ohio, and in the first volume of A Photographer's Guide to Ohio, he shared his knowledge of what to photograph in the Buckeye State and how to photograph it. Now, in this second volume, Adams expands on his previous work, adding over 120 natural features, scenic rivers and byways, zoos and public gardens, historic buildings and murals, and even winter lighting displays to the list of places to visit and photograph in Ohio. In addition to advice on photographing landscapes, he offers tips for capturing excellent images of butterflies and dragonflies. Recognizing the rapid development of new technologies, Adams includes pointers on smartphone photography, lighting and composition, digital workflow, and sharing images across a variety of platforms. The book is illustrated with more than 100 color photographs. Comprehensive and concise, these two volumes make up a travel and photography guide to almost 300 of Ohio's most noteworthy and beautiful outdoor places.

Only when the power goes off and food spoils do we truly appreciate how much we rely on refrigerators and freezers. In *Refrigeration Nation*, Jonathan Rees explores the innovative methods and gadgets that Americans have invented to keep perishable food cold—from cutting river and lake ice and shipping it to consumers for use in their iceboxes to the development of electrically powered equipment that ushered in a new age of convenience and health. As much a history of successful business practices as a history of technology, this book illustrates how refrigeration has changed the everyday lives of Americans and why it remains so important today. Beginning with the natural ice industry in 1806, Rees considers a variety of factors that drove the industry, including the point and product of consumption, issues of transportation, and technological advances. Rees also shows that how we obtain and preserve perishable food is related to our changing relationship with the natural world. "A smart and illuminating book that will be of great interest to anyone engaged with either the history of technology or the history of food."—*American Historical Review* "Rees has written an entertaining, well-narrated, and well-researched book about building one root infrastructure of modern food systems."—*Business History* "Refrigeration Nation is a well-written and useful book for both scholars and students . . . Rees presents a well-developed account of the importance of American enterprise and innovation in the national and global marketplace."—*History: Reviews of New Books* "A fascinating book."—*Heritage Radio* Jonathan Rees is a professor of history at Colorado State University – Pueblo. During the 1930s in the United States, the Works Progress Administration developed the Federal Writers' Project to support writers and artists while making a national effort to document the country's shared history and culture. The American Guide series consists of individual guides to each of the states. Little-known authors—many of whom would later become celebrated literary figures—were commissioned to write these important books. John Steinbeck, Saul Bellow, Zora Neale Hurston, and Ralph Ellison are among the more than 6,000 writers, editors, historians, and researchers who documented this celebration of local histories. Photographs, drawings, driving tours, detailed descriptions of towns, and rich cultural details exhibit each state's unique flavor. For a reader interested in small town life in the early 20th century, the WPA Guide to Ohio is an excellent resource. A series of photographs by Ben Shahn for the Farm Security Administration is well complemented with 17 selective essays about the political, industrial, and cultural life in the Buckeye State. The essay on the economy provides interesting information on the labor movement in Ohio.
