authors, and genre.

Frigoboat R134a Charging Guidelines

To avoid overcharging, it ' s best to charge in short bursts and let the system settle down for a few minutes in between. For an evaporator system like this, the pressure will drop to 3 to 7psi as the box cools down. Holding plates will show a higher initial pressure, 10-15psi, and then drop to under 10psi.

R134a Recharge Guidelines.

There is much talk and discussion in certain forums

about how to determine the correct refrigerant charge level for a capillary tube refrigeration system, but there is only one, simple method that will result in the perfect charge; the frost-line method. Pressures and current draw can be monitored to confirm that these are within expected limits, but there is no better way to gauge the refrigerant level than with the frost-line method.

[Frigoboat Blog of North America | The official word from ...](#)
refrigerant charge level in

capillary tube (cap tube) systems is by the Frost Line method. This requires no tools, no special equipment, no knowledge of refrigeration, just your eyes and your ears. Warning! Never use, or allow a technician to use, anything other than pure refrigerant R134a in a Frigoboat system. Cans of refrigerant R134a
