The instant New York Times bestseller about humanity's place in the universe—and how we understand it. "Vivid...impressive....Splendidly informative." —The New York Times "Succeeds spectacularly." —Science "A tour de force." —Salon Already internationally acclaimed for his elegant, lucid writing on the most challenging notions in modern physics, Sean Carroll is emerging as one of the greatest humanist thinkers of his generation as he brings his extraordinary intellect to bear not only on Higgs bosons and extra dimensions but now also on our deepest personal questions: Where are we? Who are we? Are our emotions, our beliefs, and our hopes and dreams ultimately meaningless out there in the void? Do human purpose and meaning fit into a scientific worldview? In short chapters filled with intriguing historical anecdotes, personal asides, and rigorous exposition, readers learn the difference between how the world works at the quantum level, the cosmic level, and the human level—and then how each connects to the other. Carroll's presentation of the principles that have guided the scientific revolution from Darwin and Einstein to the origins of life, consciousness, and the universe is dazzlingly unique. Carroll shows how an avalanche of discoveries in the past few hundred years has changed our world and what really matters to us. Our lives are dwarfed like never before by the immensity of space and time, but they are redeemed by our capacity to comprehend it and give it meaning. The Big Picture is an unprecedented scientific worldview, a tour de force that will sit on shelves alongside the works of Stephen Hawking, Carl Sagan, Daniel Dennett, and E. O. Wilson for years to come.

Twenty years after Stephen Hawking's 9-million-copy selling *A Brief History of Time*, pioneering theoretical physicist Sean Carroll takes our investigation into the nature of time to the next level. You can't unscramble an egg and you can't remember the future. But what if

time doesn't (or didn't!) always go in the same direction? Carroll's paradigm-shifting research suggests that other universes experience time running in the opposite direction to our own. Exploring subjects from entropy and quantum mechanics to time travel and the meaning of life, Carroll presents a dazzling new view of how we came to exist. A Universe from Nothing W. W. "[A] fascinating account of the twisted threads of murder, ethnic violence and mob justice in 19th century Southern California." —Jill Leovy, author of *Ghettoside: A History of Murder in America*, in the Los Angeles Times Los Angeles is a city founded on blood. Once a small Mexican pueblo teeming with Californios, Indians, and Americans, all armed with Bowie knives and Colt revolvers, it was among the most murderous locales in the Californian frontier. In *Eternity Street: Violence and Justice in Frontier Los Angeles*, "a vivid, disturbing portrait of early Los Angeles" (Publishers Weekly), John Mack Faragher weaves a riveting narrative of murder and mayhem, featuring a cast of colorful characters vying for their piece of the city. These include a newspaper editor advocating for lynch laws to enact a crude manner of racial justice and a mob of Latinos preparing to ransack a county jail and murder a Texan outlaw. In this "groundbreaking" (True West) look at American history, Faragher shows us how the City of Angels went from a lawless outpost to the sprawling metropolis it is today.

The best and most eloquent introduction to Dante for our time. Prue Shaw is one of the world's foremost authorities on Dante. Written with the general reader in mind, *Reading Dante* brings her knowledge to bear in an accessible yet expert introduction to his great poem. This is far more than an exegesis of Dante's three-part *Commedia*. Shaw communicates the imaginative power, the linguistic skill and the emotional intensity of Dante's poetry—the qualities that make the *Commedia* perhaps the greatest literary work of all time and not simply a medieval treatise on morality and religion. The book provides a graphic account of the complicated geography of Dante's version of the afterlife and a sure guide to thirteenth-century Florence and the people and places that influenced him. At the same time it offers a literary experience that lifts the reader into the universal realms of poetry and mythology, creating links not only to the classical world of Virgil and Ovid but also to modern art and poetry, the world of T. S. Eliot, Seamus Heaney and many others. Dante's questions are our questions: What is it to be a human being? How should we judge human behavior? What matters in life and in death? *Reading Dante* helps the reader to understand Dante's answers to these timeless questions and to see how surprisingly close they sometimes are to modern answers. *Reading Dante* is an astonishingly lyrical work that will appeal to both those who've never read the *Commedia* and those who have. It underscores Dante's belief that poetry can change human lives.

The Purpose Driven Life Simon and Schuster

INSTANT NEW YORK TIMES BESTSELLER A Science News favorite science book of 2019 As you read these words, copies of you are being created. Sean Carroll, theoretical physicist and one of this world's most celebrated writers on science, rewrites the history of 20th century physics. Already hailed as a masterpiece, *Something Deeply Hidden* shows for the first time that facing up to the essential puzzle of quantum mechanics utterly transforms how we think about space and time. His reconciling of quantum mechanics with Einstein's theory of relativity changes, well, everything. Most physicists haven't even recognized the uncomfortable truth: physics has been in crisis since 1927. Quantum mechanics has always had obvious gaps—which have come to be simply ignored. Science popularizers keep telling us how weird it is, how impossible it is to understand. Academics discourage students from working on the "dead end" of quantum foundations. Putting his professional reputation on the line with this audacious yet entirely reasonable book, Carroll says that the crisis can now come to an end. We just have to accept that there is more than one of us in the universe. There are many, many Sean Carrolls. Many of every one of us. Copies of you are generated thousands of times per second. The Many Worlds Theory of quantum behavior says that every time there is a quantum event, a world splits off with everything in it the same, except in that other world the quantum event didn't happen. Step-by-step in Carroll's uniquely lucid way, he tackles the major objections to this otherworldly revelation until his case is inescapably established. Rarely does a book so fully reorganize how we think about our place in the universe. We are on the threshold of a new understanding—of where we are in the cosmos, and what we are made of.

The Fermata David C Cook

Adam Nicolson explores the marine life inhabiting seashore rockpools with a scientist's curiosity and a poet's wonder in this beautifully illustrated book. The sea is not made of water. Creatures are its genes. Look down as you crouch over the shallows and you will find a periwinkle or a prawn, a claw-displaying crab or a cluster of anemones ready to meet you. No need for binoculars or special stalking skills: go to the rocks and the living will say hello. Inside each rock pool tucked into one of the infinite crevices of the tidal coastline lies a rippling, silent, unknowable universe. Below the stillness of the surface course different currents of endless motion—the ebb and flow of the tide, the steady forward propulsion of the passage of time, and the tiny lifetimes of the rock pool's creatures, all of which coalesce into the grand narrative of evolution. In *Life Between the Tides*, Adam Nicolson investigates one of the most revelatory habitats on earth. Under his microscope, we see a prawn's head become a medieval helmet and a group of "winkles" transform into a Dickensian social scene, with mollusks munching on Stilton and glancing at their pocket watches. Or, rather, is a wrinkle more like Achilles, an ancient hero, throwing himself toward death for the sake of glory? For Nicolson, who writes "with scientific rigor and a poet's sense of wonder" (*The American Scholar*), the world of the rock pools is infinite and as intricate as our own. As Nicolson journeys between the tides, both in the pools he builds along the coast of Scotland and through the timeline of scientific discovery, he is accompanied by great thinkers—no one can escape the pull of the sea. We meet Virginia Woolf and her Waves; a young T. S. Eliot peering into his own rock pool in Massachusetts; even Nicolson's father-in-law, a classical scholar who would hunt for amethysts along the shoreline, his mind on Heraclitus and the other philosophers of ancient Greece. And, of course, scientists populate the pages; not only their discoveries, but also their doubts and errors, their moments of quiet observation and their thrilling realizations. Everything is within the rock pools, where you can look beyond your own reflection and find the miraculous an inch beneath your nose. "The soul wants to be wet," Heraclitus said in Ephesus twenty-five hundred years ago. This marvelous book demonstrates why it is so. Includes Color and Black-and-White Photographs

Tracing an ancient pilgrimage route from Canterbury to Rome, the bestselling and "virtuosic" (*The Wall Street Journal*) writer explores the past and future of Christianity Moved by his mother's death and his Irish Catholic family's complicated history with the church, Timothy Egan decided to follow in the footsteps of centuries of seekers to force a reckoning with his own beliefs. He embarked on a thousand-mile pilgrimage through the theological cradle of Christianity, exploring one of the biggest stories of our time: the collapse of religion in the world that it created. Egan sets out along the Via Francigena, once the major medieval trail leading the devout to Rome, and makes his way overland via the alpine peaks and small mountain towns of France, Switzerland and Italy. Making his way through a landscape laced with some of the most important shrines to the faith, Egan finds a modern Canterbury Tale in the chapel where Queen Bertha introduced Christianity to pagan Britain; parses the supernatural in a French town built on miracles; and journeys to the oldest abbey in the Western world, founded in 515 and home to continuous prayer over the 1,500 years that have followed. A thrilling journey, a family story, and a revealing history, *A Pilgrimage to Eternity* looks for our future in its search for God.

A rising star in theoretical physics offers his awesome vision of our universe and beyond, all beginning with a simple question: Why does time move forward? Time moves forward, not backward—everyone knows you can't unscramble an egg. In the hands of one of today's hottest young physicists, that simple fact of breakfast becomes a doorway to understanding the Big Bang, the universe, and other universes, too. In *From Eternity to Here*, Sean Carroll argues that the arrow of time, pointing resolutely from the past to the future, owes its existence to conditions before the Big Bang itself—a period modern cosmology of which Einstein never dreamed. Increasingly, though, physicists are going out into realms that make the theory of relativity seem like child's play. Carroll's scenario is not only elegant, it's laid out in the same easy-to-understand language that has made his group blog, *Cosmic Variance*, the most popular physics blog on the Net. *From Eternity to Here* uses ideas at the cutting edge of theoretical physics to explore how properties of spacetime before the Big Bang can explain the flow of time we experience in our everyday lives. Carroll suggests that we live in a baby universe, part of a large family of universes in which many of our siblings experience an arrow of time running in the opposite direction. It's an ambitious, fascinating picture of the universe on an ultra-large scale, one that will captivate fans of popular physics blockbusters like *Elegant Universe* and *A Brief History of Time*.
