Over two hundred and thirty years ago the Fallocaust happened, killing almost everything that lived and creating what is now known as the greywastes. A dead wasteland where cannibalism is a necessity, death your reality, and life before the radiation nothing but pictures in dog-eared magazines. Reaver is a greywaster, living in a small block controlled by a distant ruler said to have started the Fallocaust. He is a product of the savage world he was raised in and prides himself on being cold and cruel. Then someone new to his town catches his eye, someone different than everyone else. Without knowing why he starts to silently stalk him, unaware of where it will lead him.

PhotoWork is a collection of interviews by forty photographers about their approach to making photographs and, more importantly, a sustained body of work. Curator and lecturer Sasha Wolf was inspired to seek out and assemble responses to these questions after hearing from countless young photographers about how they often feel adrift in their own practice, wondering if they are doing it the "right" way. The responses, from both established and newly emerging photographers, reveal there is no single path.

This book, by Alexander S. White, is a complete, clearly written guide to the operation of the Nikon

Coolpix P900 digital camera. The book explains all shooting modes, menus, functions, and controls of this superzoom camera, accompanied by more than 350 full-color illustrations and sample photographs. The guide shows beginning and intermediate photographers how to use the camera's many options to get the results they want. The book explains topics such as autofocus, manual focus, HDR (High Dynamic Range) photography, ISO, memory cards, and flash modes. It includes a discussion of techniques for using the P900's phenomenal zoom lens, with a maximum optical focal length of 2000mm, to full advantage. The book also discusses the camera's features for image transfer and remote control through the P900's built-in Wi-Fi network, as well as its features for adding location data to images. The book includes sample images taken with the creative settings of the camera, including the Picture Control options, which alter the color processing of images; the Scene and Special Effects shooting modes, with settings optimized for subjects such as landscapes, birds, pets, sunsets, and action shots; and the camera's features for burst shooting and time-lapse photography. In addition, the book provides introductions to topics such as infrared photography, street photography, and macro photography. The book also explains the video features of the P900, which can shoot HD video with stereo sound and can record high-speed video at rates up to 4 times normal speed. In addition, the book describes procedures for playing back images and videos in the camera and for using the Filter Effects option to add special effects to images after they have been captured. In three appendices, the book discusses accessories for the Coolpix P900, including cases, external flash units, and charging and power options. The appendices include a list of useful web sites and other resources, as well as a section with "quick tips" to help users take advantage of the camera's features in the most efficient ways possible.

"Behind Photographs began as the personal quest of photographer Tim Mantoani to document and preserve noted photographers together with their images. "We have come to a point in history where we are losing both photographic recording mediums photographic recording mediums and iconic photographers," Mantoani comments. "While many people are familiar with iconic photographs, the general public has no idea of who created them. This book became a means to do that, the photographer and their photograph in one image."--Publisher's website, <https://www.channelphotographics.com/behindphotographs.php>, viewed February 6, 2012.

Ionic polymer metal composites (IPMCs) can generate a voltage when physically deformed. Conversely, an applied small voltage or electrical field can induce an array of spectacular large deformation or actuation behaviours in IPMCs, such as bending, twisting, rolling, twirling, steering and undulating. An important smart material, IPMCs have applications in energy harvesting and as self-powered strain or deformation sensors, they are especially suitable for monitoring the shape of dynamic structures. Other uses include soft actuation applications and as a material for biomimetic robotic soft artificial muscles in industrial and medical contexts.

---

This comprehensive volume on ionic polymer metal composites provides a broad coverage of the state of the art and recent advances in the field written by some of the world's leading experts on various characterizations and modeling of IPMCs. Topics covered in this two volume set include uses in electrochemically active electrodes, electric energy storage devices, soft biomimetic robotics artificial muscles, multiphysics modeling of IPMCs, biomedical applications, IPMCs as dexterous manipulators and tactile sensors for minimally invasive robotic surgery, self-sensing, miniature pumps for drug delivery, IPMC snake-like robots, IPMC microgrippers for microorganisms manipulations, Graphene-based IPMCs and cellulose-based IPMCs or electroactive paper actuators (EAPap). Edited by the leading authority on IPMCs, the broad coverage will appeal to researchers from chemistry, materials, engineering, physics and medical communities interested in both the material and its applications.

Presented for the first time in English, this volume brings together twelve notable interviews and conversations with Henri Cartier-Bresson carried out between 1951 and 1998. While many of us are acquainted with his images, there are so few texts available by Cartier-Bresson on his photographic process. These verbal, primary accounts capture the spirit of the master photographer and serve as a lasting document of his life and work, which has inspired generations of photographers and artists. Here, Cartier-Bresson speaks passionately, with metaphors and similes, about the world and photography. A man of principles shaped by the evolving eras of the twentieth century, his major influences included Surrealism, European politics of the 1930s and '40s, the Second World War, and his experiences with Magnum as cofounder and reporter. This book illuminates his thoughts, personality, and reflections on a seminal career. In his own words: [Photography] is a way of questioning the world and questioning yourself at the same time. . . . It entails a discipline. For me, freedom is a basic frame of reference, and

inside that frame are all the possible variations. Everything, everything, everything. But it is within a frame. The important thing is the sense of limit. And visually, it is the sense of form. Form is important. The structure of things. The space.
