Valley of the Dunes Tony Northrup

Seven years, seven continents, and thirty countries, from the African savannah to the barrios of Los Angeles, from New

Zealand to Egypt, and Brazil to Burkina Faso, Chris Rainier documented the traditions of tattooing, scarification, piercing, and other forms of body altering art, the origins of which date back to the dawn of humankind. Ancient Marks reveals not only the haunting beauty of these often mystical forms, but also connects them to humanity's enduring efforts to tell stories, forge identity, and create links to the divine. "The human form became, through the brilliance of inspired artistry, a sacred geography of the soul, a map of culture

and myth expressed by forms painted, carved, or incised upon the canvas of the body" — Wade Davis. A former apprentice to Ansel Adams, award-winning Chris Rainier is considered one of the leading documentary photographers working today. Co-director of the National Geographic Society's Cultural Ethnosphere Program, he has traveled to all seven continents, including extensive expeditions throughout Africa, Antarctica, and New Guinea. Rainier's photography has been featured in Time, Life, Smithsonian, The New York

Times, Outside, and is a contributing editor for National Geographic Traveler, a contributing photographer for National Geographic Adventure and a contributing correspondent for NPR's Day to Day.

[Tony Northrup's Photography Buying Guide](#) Ansel Adams The degradable nature of high-performance, wood-based materials is an attractive advantage when considering environmental factors such as sustainability, recycling, and energy/resource conservation. The Handbook of Wood Chemistry and Wood Composites provides an excellent guide to the latest concepts and technologies in wood chemistry and bio-based composites. The book analyzes the chemical

composition and physical properties of wood cellulose and its response to natural processes of degradation. It describes safe and effective chemical modifications to strengthen wood against biological, chemical, and mechanical degradation without using toxic, leachable, or corrosive chemicals. Expert researchers provide insightful analyses of the types of chemical modifications applied to polymer cell walls in wood, emphasizing the mechanisms of reaction involved and resulting changes in performance properties. These include modifications that increase water repellency, fire retardancy, and resistance to ultraviolet light, heat, moisture, mold, and other biological

organisms. The text also explores modifications that increase mechanical strength, such as lumen fill, monomer polymer penetration, and plasticization. The Handbook of Wood Chemistry and Wood Composites concludes with the latest applications, such as adhesives, geotextiles, and sorbents, and future trends in the use of wood-based composites in terms of sustainable agriculture, biodegradability and recycling, and economics. Incorporating over 30 years of teaching experience, the esteemed editor of this handbook is well-attuned to educational demands as well as industry standards and research trends. In 2006, photographer Kevin McDermott took three of his friends up on the abandoned railroad tracks that would become New York City's High Line park to shoot a series of nudes. As McDermott states in his introduction, "at the time I took these photos, what I sought from its beauty was its sense of isolation, being alone, surrounded by nature in the middle of this metropolis." A decade later, this location is now one of the most visited tourist destinations in NYC and one of the largest real estate developments in
