The Book Of Richard is another installment in a series of photography books by American artist LG Williams. The Book Of [Your Name Here] series, originating in January 2015, is an artistic re-examination of the "miracle" of the daguerreotype photograph, in which the artist reaches back to the origins of photography. On August 19, 1839 the French Academy of Sciences announced the invention of the daguerreotype by the scene painter and physicist Louis-Jaques-Mande Daguerre (1787-1851). Word of the discovery spread swiftly, and the daguerreotype photography enjoyed great popularity until the 1850s, especially in America where the process was free from patent restrictions. While there was great demand for portraits captured by the "miracle" of photography, early daguerreotype technology had its shortcomings. The necessarily long exposure times that were required to capture an image, fifteen minutes on average under bright lights, led to necessarily inevitable lacunae in representing the subject. The resulting single image daguerreotypes are de facto composites of the lapsed long exposure time, but not, as was purported, scientifically captured replicas of both time and image. This publication and series presents an opportunity for Williams to provide an artistic, political, and social perspective on the missing truths, images, and loss of time that occurred during the age of Daguerre. In other words, each book from this single-portrait-series consists of hundreds of continuous images during a fifteen-minute stretch of time, or just about as many images as the artist could take as fast as possible using his out-dated FujiFilm FinePix Z70 3-MP Digital Camera. From this historical perspective, Williams' series points to the limitations of daguerreotype photography with the seemingly limitless possibilities of contemporary analogue-image capture and production.

"This friendly book leads us clearly and gracefully from the basics to advanced techniques in photography composition . . . highly recommended." —Brian Taylor, executive director, Center for Photographic Arts There's a common misconception that composition is mysterious and that only certain people have that natural gift for the techniques involved. The truth is that composition involves a set of skills that you can master. Just as you can use cookbook recipes to make your favorite meal—you don't have to be a famous French chef—you also can take amazing photos by just following a recipe! Marc Silber has spent years studying the works of masters and interviewing some of the biggest names in photography. The Secrets to Creating Amazing Photos puts at your fingertips ideas for improving your skills by giving you easy-to-follow "recipes" that will improve your photography right now! Composition is one of the biggest keys to creating photos that others will love. No matter what kind of camera or smartphone you're using, you can take your photography to the next level and beyond by learning composition tools and secrets known to the masters of the art. With this handy guide, you can flip to the look you want on the spot and follow the recipe for creating an image that inspires you. Use it when you're out photographing to get new ideas and inspiration. "Buy it, read it and then apply what you have learnt from this superb new book . . . This is a complete must-have, a veritable cornucopia of wisdom gained over decades of experience." —Gray Levett, editor of Nikon Owner magazine
