Especially Robson Trowbridge. He was a part-time werewolf, a full-time bastard, and the first and only boy I ever loved. That is, until he became the prime suspect in my father's death... Today I'm a half-thought I'd turn to: breed barista working at a fancy coffee house, living with my loopy Aunt Lou and a temperamental amulet	named Merry, and wondering where in the world I'm going in life. A pretty normal existence, considering. But when a pack of Weres decides to kidnap my aunt and force me to steal another amulet, the only one who can help me is the last person I ever Robson Trowbridge. And he's as annoyingly beautiful as I remember. That's the trouble with fate:

PC Mag Center for America Places Incorporated Photogrammetry is a science based technology with more than a century of history and development. During this time, the techniques used to get information about objects represented in photos have changed dramatically from pure optic mechanical

equipment to a fully digital workflow in our days. Parallel to this, the handling became easier, and so it's possible also for non-photogrammetrists to use these methods today. This book is especially written for potential users which have no photogrammetric education but would like to use the powerful capabilities from time to time or in smaller projects: Geographers, Geologists, Cartographers, Forest Engineers who would like

to come into the fascinating field of photogrammetry via "learning by doing". For this reason, this book is not a textbook - for more and deeper theory, there exists a lot of literature, and it is suggested to use some of this. A special recommendation should be given to the newest book from KONECNY (2002) for basic theory and the mathematical backgrounds or to the book from SCHENK (1999) for the particular situation in digital

photogrammetry. For a quick reference especially to algorithms and technical terms see also the Photogrammetric Guide from ALBERTZ & KREILING (1989). This book includes a CD-ROM which contains all you need from software and data to learn about the various methods from the beginning (scanning of the photos) to final products like ortho images or mosaics.
