Millions of children are dying each year with preventable and reversible critical illness, including circulatory shock and respiratory failure. According to the World Health Organization, in 2015, the under-five mortality rate in low-income countries was 76 deaths per 1000 live births – about 11 times the average rate in high-income countries (7 deaths per 1000 live births). There is limited data about the nature of the delivery of critical care in resource-limited regions. The care of critically ill children in low-resource settings is challenging, contributing factors include limitations in the existing infrastructure, lack of resources, and low numbers of appropriately trained healthcare workers. Meeting these challenges requires clinical evidence pertinent to the local settings, adequate number of well-trained personnel, quality improvement activities, and the ongoing development of preventative measures. In addition, approaches to prevent worsening critical illness in at-risk hospitalized patients are needed. We are presenting 15 state-of-the-art manuscripts from international experts, from all settings, involved in the care of critically ill children in resource-limited settings. This collection of manuscripts covers topics including education, research, clinical experience and infectious diseases. We hope that we are providing a window into the

future of critical care delivery for all children around the world. Handbook for Health Care Research Frontiers Media SA

"Handbook for Health Care Research, Second Edition, provides step-by-step guidelines for conducting and analyzing research, teaching students and practitioners how to implement research protocols and evaluate the results even if they lack experience or formal training in the research process. Features include easy reference of basic research procedures and definitions as well as information on how

test to use and how to format information for computer entry. Statistical procedures and published findings are illustrated with real-world examples from health care practice in this user-friendly resource. Readers will also learn the research basics necessary to understand scientific articles in medical journals and discover how to write abstracts that will pass peer review. Handbook for Health Care Research, Second Edition, is an excellent tool to help students and practitioners become "educated consumers" of research and apply the principles of scientific analysis to provide a sound basis for patient care." --Book Jacket.

The ICU Book Lww Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary caregivers" are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build

and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child

outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Classic Papers in Critical Care American Academy of Pediatrics America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009--roughly \$750 billion--was wasted on unnecessary services, excessive

administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. *Best Care at Lower Cost* emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and

electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions. *Comprehensive Critical Care* F.A. Davis The fourth edition of *Critical Care Obstetrics* has been extensively revised to

reflect the advances that have been made in maternal-fetal medicine. This edition contains 14 brand new chapters written by the field's leading physicians. *Critical Care Obstetrics, 4/e*, offers expanded coverage in areas vital to intensive care management, including Neonatal Resuscitation, The Organ Transplant Obstetrical Patient, and Ethical Considerations This practical guide and reference will be of invaluable assistance to obstetricians, and primary care physicians, in both the treatment and referral of high-risk patients. *Workbook for Fundamental Concepts and Skills for the Patient Care Technician* F.A. Davis This book presents a practical approach to patient safety issues with a focus on evolution and understanding the key concepts in health care and turning them into implementable actions. With its contemporary approach and lucid presentation, this book is a valuable resource for practicing doctors in medicine and surgery to treat their patients with care, diligence and vigilance and contribute to a safer practice in health care. *Parenting Matters*

McGraw Hill Professional Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities
