Applying the second of the given boundary conditions shows that the function $f(t)$ has the following value: $2 f(t) R R$ Thus the radial velocity in the fluid at any distance r from the sphere at any time t will be: $2 (,) R R r t r r$ Integrating the foregoing equation with respect to r yields the result: $2 (,$

) () $R R r t g t r$ where $() g t$ is some function of time.
