For most gases at standard or near standard conditions, the relationship among pressure, density, and temperature is given by the perfect gas equation of state: $p = \rho RT$, where R is the specific gas constant. For air at near standard conditions, $R = 287 \text{ J/(kg} \cdot \text{K)}$ in the International System of Units and $R = 1716 \text{ ft} \cdot \text{lb/(slug} \cdot \text{R)}$ in the English Engineering System of Units.
