Chemical reaction engineering (reaction engineering or reactor engineering) is a specialty in chemical engineering or industrial chemistry dealing with chemical reactors. Frequently the term relates specifically to catalytic reaction systems where either a homogeneous or heterogeneous catalyst is present in the reactor.

Web Modules. These modules show how key concepts of chemical reaction engineering can be applied to non-standard problems (e.g. the use of Wetlands to degrade toxic chemicals). Current modules focus on Chapters 4 and 6 and include Wetlands, Cobra Bites, Membrane Reactors and Reactive Distillation modules.

Fundamentals of Chemical Reaction Engineering

It covers both homogeneous and heterogeneous reacting systems and examines chemical reaction engineering as well as chemical reactor engineering. The authors take a chemical approach, helping students develop an intuitive feeling for concepts, rather than an engineering approach, which tends to overlook the inner workings of systems and objects.

This book is an introduction to
the quantitative treatment of
chemical reaction engineering. It
is appropriate for a one-semester
undergraduate (or first-year
graduate) course. The text
provides a balanced approach:
first, it covers both homogeneous
and heterogeneous reacting
systems; second, it covers both
chemical reaction engineering
and chemical reactor engineering.
