This example is an air flow problem using a supply vent on one side of a room and an open vent on the opposite side. It demonstrates how "vents" are used to define boundary conditions how flow into a model must have an exit.

HEAT AND MASS TRANSFER - webservers.dmt.upm.es

Heat capacity or thermal capacity is a physical property of matter, defined as the amount of heat to be supplied to a given mass of a material to produce a unit change in its temperature.. The SI unit of heat capacity is joule per kelvin (J/K).. Heat capacity is an extensive property.The corresponding intensive property is the specific heat capacity.Dividing the heat capacity by the amount of ...

8(a) Physical Properties of Water

Mass transfer is the net movement of mass from one location, usually meaning stream, phase, fraction or component, to another. Mass transfer occurs in many processes, such as absorption, evaporation, drying, precipitation, membrane filtration, and distillation.Mass transfer is used by different scientific disciplines for different processes and mechanisms.
