Managerial Economics Univ of California Press
In Compensation and Benefit Design , Bashker D. Biswas shows exactly how to bring financial rigor to the crucial "people" decisions associated with compensation and benefit program development. This comprehensive book begins by introducing a valuable Human Resource Life Cycle Model for considering compensation and benefit programs. Next, Biswas thoroughly addresses the acquisition component of compensation, as well as issues related to general compensation, equity compensation, and pension accounting. He assesses the full financial impact of executive compensation programs and employee benefit plans, and discusses the unique issues associated with international HR systems and programs. This book contains a full chapter on HR key indicator reporting, and concludes with detailed coverage of trends in human resource accounting, and the deepening linkages between financial and HR planning. Replete with both full and "mini" case examples throughout, the book also contains chapter-

ending exercises and problems for use by students in HR and finance programs. 2 More than ever before, HR practitioners must empirically demonstrate a clear link between their practices and firm performance. In Investing in People , Wayne F. Cascio and John W. Boudreau show exactly how to choose, implement, and use metrics to improve decision-making, optimize organizational effectiveness, and maximize the value of HR investments. They provide powerful techniques for looking inside the HR "black box," implementing human capital metrics that track the effectiveness of talent policies and practices, demonstrating the logical connections to financial and line-of-business, and using HR metrics to drive more effective decision-making. Using their powerful "LAMP" methodology (Logic, Analytics, Measures, and Process), the authors demonstrate how to measure and analyze the value of every area of HR that impacts strategic value.

The economic concepts presented in FUNDAMENTAL OF MANAGERIAL ECONOMICS, 9e, show students how to use common sense to understand business and solve managerial problems without calculus. This innovative text helps students develop and sharpen their economic intuition--an invaluable skill that helps students, as future managers, decide which products to produce, costs to consider, and prices to charge, as well as the best hiring policy and the most effective style of organization. With its unique integrative approach, the text presents the firm as a cohesive, unified organization and demonstrates that important business decisions are interdisciplinary. A basic valuation model is constructed and used as

the underlying economic model of the firm; each topic is then related to an element of the value maximization model--a process that shows how management integrates accounting, finance, marketing, personnel, and production functions. The text also provides an intuitive guide to marginal analysis and basic economic relations. Once students grasp the importance of marginal revenue and marginal costs, the process of economic optimization becomes intuitively obvious. In addition, a wide variety of examples and simple numerical problems vividly illustrate the application of managerial economics to a vast assortment of practical situations.
