On this basis, H1 may be viewed as a time-invariant system with memory. System H2 is causal because the output does not appear before the input. The duration of the output is longer than that of the input. This suggests that H2 must have memory. It is time-invariant. System H3 is noncausal because the output appears before the input.

Signals and Systems: Part I / Solutions S2-7 (c) We need to recognize that $(2)2n = (1)'$. Thus, $- = o-4$ since 1. S2.9 (a) The sum $x(t) + y(t)$ will be periodic if there exist integers n and k such that $nT_1 = kT_2$, that is, if $x(t)$ and $y(t)$ have a common (possibly not fundamental) period.
