It's a tough time to be a scientist: universities are shuttering science departments, federal funding agencies are facing flat budgets, and many newspapers have dropped their science sections altogether. But according to Marc Kuchner, this antiscience climate doesn't have to equal a career death knell-it just means scientists have to be savvier about promoting their work and themselves. In Marketing for Scientists, he provides clear, detailed advice about how to land a good job, win funding, and shape the public debate. As an astrophysicist at NASA, Kuchner knows that "marketing" can seem like a superficial distraction, whether your daily work is searching for new planets or seeking a cure for cancer. In fact, he argues, it's a critical component of the modern scientific endeavor, not only advancing personal careers but also society's knowledge. Kuchner approaches marketing as a science in itself. He translates theories about human interaction and sense of self into methods for building relationships-one of the most critical skills in any profession. And he explains how to brand yourself effectively-how to get articles published, give compelling presentations, use social media like Facebook and Twitter, and impress potential employers and funders. Like any good scientist, Kuchner bases his conclusions on years of study and experimentation. In Marketing for Scientists, he distills the strategies needed to keep pace in a Web 2.0 world.

While there have been many sociological and psychological studies of humor, few can claim to be funny. Humor may be regarded as a legitimate topic for social scientists, but in general, they present their research rather seriously. In academia, humor tends to be trivialized and dismissed. This is more than just a missed opportunity for otherwise fun-loving academics. In literature, it is readily accepted that comedy is integral to the human condition. To ignore humor is to reject a potentially insightful methodological approach, as the humorous worldview presents unique opportunities for investigating the social. This book constitutes a unique resource, presenting chapters on irony, satire and parody as tools for analysis and means of representation, as well as considering humor in the conduct of research, and offering guidance on getting published. Through presenting examples from across the social sciences, the book seeks to persuade and inspire rather than to prescribe an approach – a closure which would (ironically) be inimical to the multiplicity and ambiguity which characterizes humorous research and lends it its distinctive edge.

Gábor Lővei's scientific communication course for students and scientists explores the intricacies involved in publishing primary scientific papers, and has been taught in more than twenty countries. Writing and Publishing Scientific Papers is the distillation of Lővei's lecture notes and experience gathered over two decades; it is the coursebook many have been waiting for. The book's three main sections correspond with the three main stages of a paper's journey from idea to print: planning, writing, and publishing. Within the book's chapters, complex questions such as 'How

to write the introduction?' or 'How to submit a manuscript?' are broken down into smaller, more manageable problems that are then discussed in a straightforward, conversational manner, providing an easy and enjoyable reading experience. Writing and Publishing Scientific Papers stands out from its field by targeting scientists whose first language is not English. While also touching on matters of style and grammar, the book's main goal is to advise on first principles of communication. This book is an excellent resource for any student or scientist wishing to learn more about the scientific publishing process and scientific communication. It will be especially useful to those coming from outside the English-speaking world and looking for a comprehensive guide for publishing their work in English.

Very few students and even professionals know how to write using American Psychological Association Style. You are not the only one. Beth Lee knows this to be true, because she has been teaching APA style for more than a dozen years. She's accustomed to hearing students say things such as: What is APA? How do I use it? Can't I just use MLA? The reality is that many professors, instructors, and professions insist on using APA Style. In this guide, you'll learn how to: take down information to make citing easier; look up information in style guides; memorize the most important rules; and avoid the most common mistakes. While it would be easy to copy and paste web addresses into essays and academic papers, that is not how APA Style works. If you don't know the rules, your writing won't be taken as seriously and if you're in school your marks will suffer. Once you understand the main elements of APA style, you'll be equipped to use more complex style guides and reference materials. Bolster your academic writing today with lessons in The ABCs of APA Style.

A concise and accessible primer on the scientific writer's craft The ability to write clearly is critical to any scientific career. The Scientist's Guide to Writing provides practical advice to help scientists become more effective writers so that their ideas have the greatest possible impact. Drawing on his own experience as a scientist, graduate adviser, and editor, Stephen Heard emphasizes that the goal of all scientific writing should be absolute clarity; that good writing takes deliberate practice; and that what many scientists need are not long lists of prescriptive rules but rather direct engagement with their behaviors and attitudes when they write. He combines advice on such topics as how to generate and maintain writing momentum with practical tips on structuring a scientific paper, revising a first draft, handling citations, responding to peer reviews, managing coauthorships, and more. In an accessible, informal tone, The Scientist's Guide to Writing explains essential techniques that students, postdoctoral researchers, and early-career scientists need to write more clearly, efficiently, and easily. Emphasizes writing as a process, not just a product Encourages habits that improve motivation and productivity Explains the structure of the scientific paper and the function of each part Provides detailed guidance on submission, review, revision, and publication Addresses issues related to coauthorship, English as a second language, and more
