[The Welding of Aluminium and its Alloys](#) is a practical user's guide to all aspects of welding aluminium and aluminium alloys. It provides a basic understanding of the metallurgical principles involved showing how alloys achieve their strength and how the process of welding can affect these properties. The book is intended to provide engineers with perhaps little prior understanding of metallurgy and only a brief acquaintance with the welding processes involved with a concise and effective reference to the subject. The book includes sections on parent metal storage and preparation prior to welding. It describes the more frequently encountered processes and has recommendations on welding parameters that may be used as a starting point for the development of a viable welding procedure. Included in these chapters are hints and tips to avoid some of the pitfalls of welding these sometimes-problematic materials. The content is both descriptive and qualitative.

The author has avoided the use of mathematical expressions to describe the effects of welding. This book is essential reading for welding engineers, production engineers, production managers, designers and shop-floor supervisors involved in the aluminium fabrication industry. Clarence 'Kelly' Johnson's design for the Lockheed Constellation, known affectionately as the 'Connie', produced one of the world's most iconic airliners. Lockheed had been working on the L-044 Excalibur, a four-engine, pressurized airliner, since 1937. In 1939, Trans World Airlines, at the instigation of major stockholder Howard Hughes, requested a 40-passenger transcontinental aircraft with a range of 3,500 miles, well beyond the capabilities of the Excalibur design. TWA's requirements led to the L-049 Constellation, designed by Lockheed engineers including Kelly Johnson and Hall Hibbard. Between 1943 and 1958, Lockheed built 856 Constellations in numerous models at its Burbank, California, factory – all with the same distinctive and immediately recognizable triple-tail design and dolphin-shaped fuselage. The Constellation was used as a civil airliner and as a military and civilian air transport, seeing service in the Berlin and the Biafran airlifts. Three of them served as the presidential aircraft for Dwight D. Eisenhower. After the Second World War, TWA's transatlantic service began on 6 February 1946 with a New York-Paris flight in a Constellation. Then, on 17 June 1947, Pan Am opened the first-ever scheduled round-the-world service with their L-749 Clipper America. In this revealing insight into the Lockheed Constellation, the renowned aviation historian Graham M. Simons examines its design, development and service, both military and civil. In doing so, he reveals the story of a design which, as the first pressurized airliner in widespread use, helped to usher in affordable and comfortable air travel around the world.
